

Tokelau 2014 Fact Sheet

The 2014 Tokelau GSHS was a school-based survey of students in years 7, 8, 9, 10, 11, 12 and 13, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in years 7, 8, 9, 10, 11, 12 and 13 in Tokelau. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Tokelau GSHS measured alcohol use; drug use; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scanable answer sheet.

The school response rate was 100%, the student response rate was 71%, and the overall response rate was 71%. A total of 140 students participated in the Tokelau GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.
