

CROWN OF THORNS STARFISH KILL CORALS

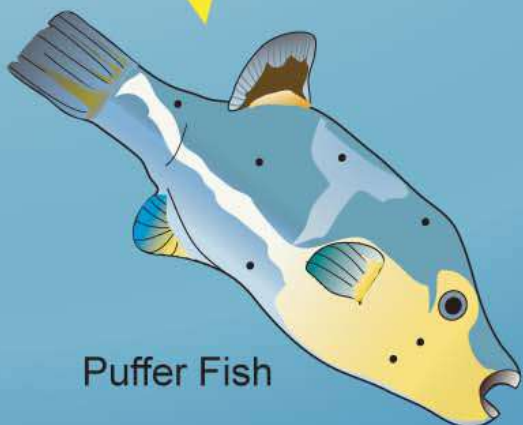

Crown of Thorns Starfish (COT)

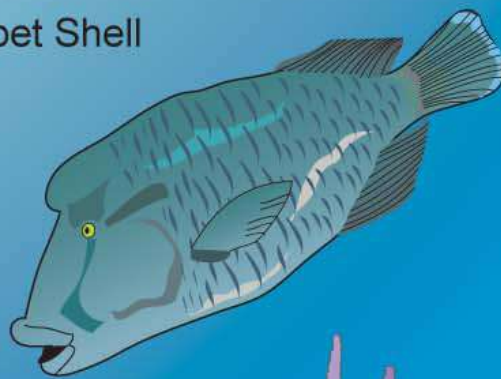

Animals that eat COT have become very rare because of over-fishing

Triton's Trumpet Shell

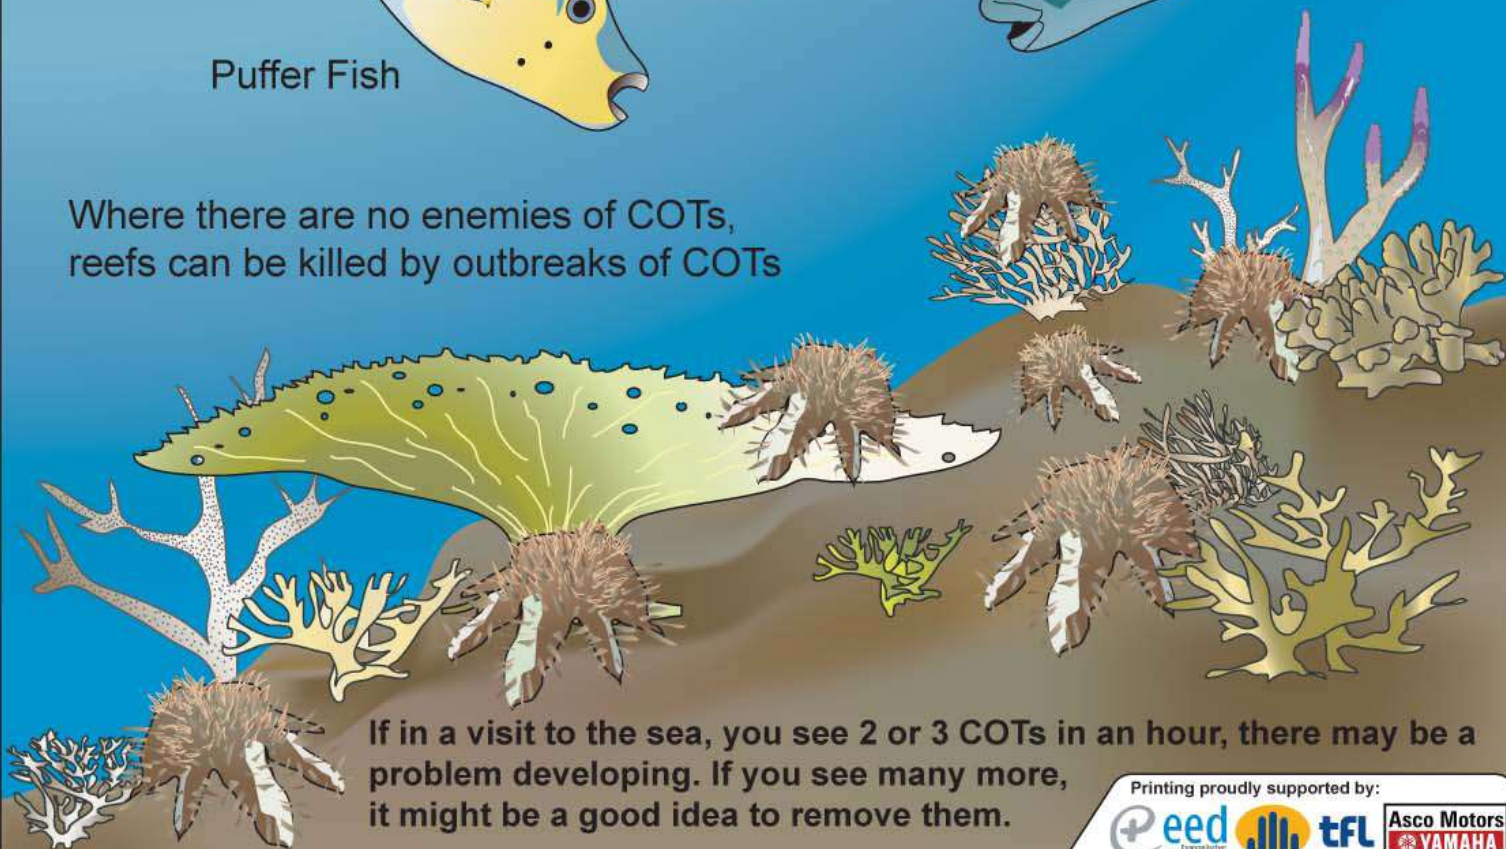

Puffer Fish

Large Wrasse

Where there are no enemies of COTs, reefs can be killed by outbreaks of COTs

If in a visit to the sea, you see 2 or 3 COTs in an hour, there may be a problem developing. If you see many more, it might be a good idea to remove them.
