Foreword

In June 2003, SPC's Regional Adolescent Reproductive Health (ARH) Project located in Suva requested SPC's Noumea-based Demography/Population programme to assist them in compiling a *Pacific Youth Database*, to capture pertinent and up-to-date information about youth in the Pacific, with special reference to adolescent demographic, social and socio-economic data and indicators, including those pertaining to adolescent reproductive health data and indicators. The key objective of this undertaking was to assist the project strengthen its programme development and monitoring activities in support of adolescent reproductive health.

It was established fairly in the project, that many of the reproductive health data and indicators were either not available in the desired format in most countries, or that the Regional Adolescent Reproductive Health (ARH) Project, through its program contacts, was much better placed to try and locate these data items than SPC's Noumea-based Demography/Population programme, which was to concentrate its activities on the compilation and calculation of key sociodemographic and socio-economic data and indicators for the project's Pacific Island member countries: Federated States of Micronesia, Fiji, Kiribati, Marshall Islands, Samoa, Solomon Islands, Tonga, Tuvalu, Vanuatu, Cook Islands, Palau, Nauru, PNG and Niue.

The final list of youth and reproductive health data and indicators has been discussed extensively between both SPC program areas, and I would like to thank Drs. Jimmie Rodgers and Rufina Latu from SPC Suva, and Mr. Arthur Jorari from SPC Noumea, for a very collaborative and constructive dialogue maintained throughout the entire exercise. I am also very grateful to participating countries, through their respective Government statisticians, for their wonderful support and cooperation; we are aware of difficulties some of our colleagues face in allowing regional agencies, like SPC, access to their census and survey databases, so we can assist in the calculation of demographic, social and socio-economic indicators, which are critical to national policy development and planning efforts.

This database was prepared under the leadership of Mr. Arthur Jorari, with assistance provided by Ms Gladys Beccalossi, both from SPC's Noumea-based Statistics for Development programme. To update this database in 2011, we are also very grateful to the Governments of Fiji and Vanuatu for agreeing to short-term secondments of two of their more senior and experienced data processing staff, Mr. Toga Raikoti and Mr. Rara Soro respectively, to assist us with data processing in Noumea.

Arthur Jorari

Demographer, SPC Statistics for Development Programme

Noumea, October 2011

A. GLOSSARY

1 Total Population

Absolute count of resident population at the time of the latest population and housing census.

2 Proportion

The relation of a population subgroup to the entire population; in this database, population subgroup in each table cell was divided by the appropriate column population. Unless otherwise stated, all proportions are expressed as percent (%).

3 Population Growth Rate

The growth rate is the rate at which a population is increasing (or decreasing) in a given year due to natural increase and net migration, expressed as a percent of the base population.

4 Sex Ratio

The sex ratio is the ratio of males to females in a given population, usually expressed as the number of males for every 100 females.

5. Median Age

The median age is the age which divides a population in exactly two equal groups. A median age of 18 means, that half of a country's population is younger and older than 18 years of age.

6 Age-Dependency Ratio

The age-dependency ratio is the ratio of persons in the "dependent" ages (generally under age 15 and over age 64 years) to those in the "economically productive" ages (15-64 years) in a population. The age-dependency ratio is sometimes divided into old-age dependency (the ratio of people ages 65 and older to those ages 15-64) and child or youth dependency (the ratio of people under age 15 to those ages 15-64).

7 Population of Young People

Population in the age range from 10 to 24 years

8 Youth Population

Population in the age range from 15 to 24 years

9 Adolescent Population

Population in the age range from 10 to 19 years

10 Urban-Rural Ratio

This indicator is a ratio that gives the number of urban persons for each person living in the rural areas. That is, if the indicator has a value of 1, it means that the urban population is equal to the rural population.

11 Mean Age at first Marriage (SMAM)

It means that half the people marrying for the first time in a given year got married before the median age and half after. The median age at first marriage is usually computed separately for males and females, because females typically marry at younger ages. The median age at first marriage has an effect on a population's fertility. The importance of this factor depends on the extent to which childbearing is limited to marriage.

12 Currently Married

Population currently married, or living in a "de facto" union.

13 Ever Married

Population currently married, living in a "de facto" union, or who were once married but now are separated, divorced or widowed.

14 Educational Attainment

Data on educational attainment refer to the highest level (grade) of formal schooling completed. In this database we differentiate between no schooling (which includes people who have only attended some years of primary schooling), and those who completed primary education, secondary education, and tertiary education. People, who have only attended some years of secondary education, but not completed the secondary cycle, are recorded as having "completed primary education" as their highest level of educational attainment.

15 Labour Force

Usually refers to all people aged 15 years of age and older who, during the census reference week, did any of the following:

- were employed (working for a wage or salary), or were an employer themselves, or running a business;
- worked predominantly in agriculture or fishing activities, either of a commercial ("for money") or subsistence nature ("to provide for the family");
- did a combination of these activities; or
- did not work, but were actively looking for work.

People who do not fall into any of these categories, are referred to as people “*not in the labour force*”. This group comprises

- Full-time students
- Housewives (or home-makers)
- The elderly (and or retired people)
- People not working due to a disability
- People in institutions (eg. prison)

When referring proportion of people in formal employment, in subsistence agriculture, or being unemployed, our reference population is the total labour force (NOT the total population aged 15+).

In the most recent round of censuses, most Pacific island countries and territories employed this broad definition, compared to earlier censuses, when only few PICTS considered subsistence farmers and fishermen (and women) as part of their labour force, or economically active population.

For comparative assessments, over time and between countries, it is imperative for you be aware of different definitions and classifications.

It is also worth noting, that some former and current US Pacific territories use 18 years as a cut-off point for their published data.

16 Labour force participation rate

The number of persons in the labour force at a given age, sex or level of education, divided by the corresponding total number of persons of the same characteristics.

17 Unemployment Rate

Refers to the number of unemployed people aged 15 years and older to the total labour force (NOT to the total population aged 15+).

This group of people is defined as those who did NOT work in the census reference week, but were actively looking for work.

18 Crude Birth Rate

The crude birth rate indicates the number of live births per 1,000 population in a given year.

19 Age-Specific-Fertility-Rate

Refers to the fertility rates for specific age groups. This allows both for comparisons over time or to see differences in fertility behavior at different ages.

20 Total Fertility Rate

The total fertility rate (TFR) is the average number of children that would be born to a woman by the time she ended childbearing if she were to pass through all her childbearing years conforming to the age-specific-fertility rates of a given year.

21 Infant Mortality Rate

The infant mortality rate refers to the number of deaths of infants (less than 1 year of age), per 1,000 live births in a given year.

22 Maternal Mortality Ratio

The maternal mortality ratio is the number of women who die as a result of complications of pregnancy or childbearing in a given year per 100,000 live births in that year. Deaths due to complications of spontaneous or induced abortions should also be included.

Note: this represents one of the most misused demographic indicators in the region, as we are not only dealing with quite small numerators, relative to a fairly large denominator (100,000 live births), but also with non-reporting of events on one side, or a chance event on the other (the death of a mother in circumstances that have "little" to do with health conditions of a country, such as a freak storm preventing a women being taken hospital by sea/plane).

This danger is neatly illustrated in the following example (reprinted from SPC Population/Demography programme's course book on "Introduction to population GIS for policy analysis and planning", Noumea 2003:38).

Illustration 3.3: Being *half-dead*

In 1991, a Pacific island country had a reported MMR of 191; as indicated above, this means 191 maternal deaths for every 100,000 live births.

In a country, with a population then estimated at some 9,000 people, and a Crude Birth rate of 29/1000, we would have had around 262 births. An MMR of 191 applied to such a small number of births means: half a death!

That is correct, as $(191 : 100,000) = (x : 262)$ leads to 0.50042 deaths!

While there is an obvious flaw with data registration somewhere, this example illustrates the danger of using certain demographic measures with small populations! Should there really have been a maternal death amongst 262 live births, the MMR would have amounted to 382/100,000 live births, and a single death would have placed this country in the company of much poorer African and Asian countries where maternal mortality remains a major health problem.

23 Life Expectancy at birth

Life expectancy at birth represents the most widely used indicator of general mortality conditions. It is an estimate of the average number of additional years a person could expect to live, if the age-specific death rates for a given year prevailed for the rest of his or her life.

Like infant mortality, this concept is widely regarded as a good indication of health conditions/health status of a specific country, and closely associated with general levels of social and economic development.

Note: this measure is not a rate that can be directly calculated. It is a hypothetical measure, derived from empirical (real) or model life tables (*real* meaning, for life tables we can construct based on information available from age-specific death-rates).

This figure is indicative of current health conditions, and apart from being subject to changes in these conditions, it varies considerably between sex, race and other social-economic indicators, such as social class, occupation etc.

When estimated indirectly (either via orphan hood data, or information on surviving births over the last 12 months available from censuses), problems of under-estimating mortality (and hence inflating life expectancy values or deflating IMR) can occur in situation where census counts are incomplete.

Such a problem is illustrated in the recent Vanuatu census (1999), where 3% of the enumerated population (N=5,398) have not provided an account of their age (N=5,398), and

where we find 3,508 men over 65 years of age, compared to only 2,720 women of the same age group - yet come across a reported life expectancy of 69 years for women compared to 65.6 years for men!

24 Net Migration

The net effect of immigration and emigration on an area's population (increase or decrease) between two time points is referred to as net migration.

When dealing with population censuses, the impact of net migration on the resident population of a specific area (e.g. island, town, district, all rural areas in a country) is usually ascertained from cross-tabulating people's current residence, with their residence 5 years, or 1 year prior to the census.

Example: calculating net migration from census data,

Kiribati 1995-2000

Island	[Res] Resident	[NM] non-movers	[In] IN-migrant	[Out] Out--migrant	[NetMig] Net migrants (NM+In)-(NM+Out)	Annual net migration rate (%) [(NetMig)/5]/Res*100
Residence: 1995		on island	elsewhere	on island		
Residence: 2000	on island	on island	on island	elsewhere		
Marakei	2,125	1,880	245	787	-542	-5.1
South Tarawa	31,549	22,201	9,348	5,849	3,499	2.2
Kiritimati	2,927	1,787	1,140	799	341	2.3
KIRIBATI	72,525	51,659	20,866	18,915	1,951	0.5

25 Annual Net Migration Rate

The annual net migration rate shows the net effect of in-migration, and out-migration on an area's population, expressed as annual increase or decrease.

This change can be expressed in either (%), as in this table, or per 1,000 population of the specific residence area in a given year.

B. COUNTRY UPDATE DOCUMENTATION

I. FIJI

The Fiji Islands database was updated using the 2007 Population Census data currently available (not yet finalized), which would then had to be revised, where necessary, once the final data and report is being released by Fiji Bureau of Statistics (FBOS).

Methodology

Due to the detailed database specification, new tabulations had to be done to generate the required information.

1. General Population

- a) A cross tabulation of age group by area and sex was done.
- b) Proportion is calculated by dividing by their respective total for each category (%)
- c) Growth Rate is calculated using the log function to include the period between censuses. i.e $\text{LN}(\text{current pop}/\text{previous pop})/11.06 * 100$. (11.06 is the period between 1996 and 2007 census)
- d) Sex ratio = $\text{Male}/\text{Female} * 100$.

2. Age

- a) Median age is directly generated from CSpPro tabulation.
- b) Proportions of different age groups are calculated as percentages of the total population.
- c) Total Dependency Ratio = $\text{sum}(<15, 65+)/(\text{15-64}) * 100$
- d) Youth Dependency Ration = $\text{sum}(<15)/(\text{15-64}) * 100$
- e) Old-Age Dependency Ration = $\text{sum}(65+)/(\text{15-64}) * 100$

3. Urban / Rural Ratio

- a) This is simply $\text{Urban}/\text{Rural} * 100$ for each sex and age category for the total population.

4. Marital Status

- a) Using the marital status variable and re-classifying it to:
 - i. 'Currently Married' which includes Legally Married and De-Facto and
 - ii. 'Ever Married' which includes 'Currently Married', Separated, Divorced & Widowed
- b) Proportions are calculated as percentage to their respective total population age groupings and the total population being the age 15 and above population.

- c) SMAM (Mean Age at Marriage) is calculated for Males and Females using proportions of Single (Never Married) population against the total population for each age category from 15-54 and using various formulas to derive the SMAM.

5. Educational Attainment

- a) Indicator is determined by the school attendance whether the person is attending full-time, part-time, left school or never been to school.
- b) A breakdown of the indicator includes:
 - i. No Education = All those that are doing Primary and Below (Blank, 00-06)
 - ii. Primary = All those doing Secondary (09-14)
 - iii. Secondary = currently doing Tertiary but not completed
 - iv. Tertiary = completed Tertiary Education
 - v. Else = Other Education
- c) Proportions are calculated with reference to total population (5+ Population) as well as to the respective age group population for the different age group attainments.

6. Labor Force Participation

- a) Labor Force includes a combination of Working for Money, Producing Goods for Sale; Own Consumption (subsistence) and Actively Looking for Work i.e. Question D19a=1 AND D24=1
- b) Wages & Salary includes those who Only Work for Money i.e. D19b=1
- c) Employed includes those doing Money Work and excluding 'Subsistence Only'.
- d) Unemployed are those Actively Looking for Work.
- e) Proportions are calculated with total labor force as the reference population.

7. Fertility

- a) Table generated for this is from the fertility questions of the questionnaire (question F4), which includes all 'Women who bore a child One Year before Census (Live Births)' by age 15-49.
 - i. Crude birth rate = $\text{No. Live Births} / \text{Total Pop} * 1000$
 - ii. ASFR = $\text{No. Births (each Age Group)} / \text{Total Female Pop (Age Group)}$
 - iii. TFR = $(\text{Sum of ASFR}) * 5$
 - iv. Teenage Fertility = $+ \text{ASFR}(\text{age 15-19}) * 1000$

8. Mortality

- a) This is not done as data from Census is not always reliable and data from health is used using indirect method.

9. Migration

- a) Data is generated using a cross tabulation of the question on the 'Place of Residence in the Last 5 Years' by Current Residence.
- b) Since data on migration is not available, figures provided **ONLY** include IN-migrants data
- c) Number of migration is the number of people not living in the country 5 years ago.
- d) 5-year crude net migration = $\text{No. migration} / \text{total residence} * 1000$
- e) Annual CNM = $5\text{-year CNM} / 5$
- f) Rate of Urbanisation = $\text{Total Urban Pop} - \text{Total Rural Pop}$
- g) The above is calculated for the different age groups.

II. KIRIBATI

The Kiribati database was being updated using the 2010 Population Census but after a couple of days into the updating, it was realized that the data was not reliable as some indicators were showing very awkward figures and was inconsistent to the previous census indicators. This is confirmed after liaising with the SPC data processing experts that the data is not yet fully edited.

Hence, the database was updated using the 2005 Population Census data.

Methodology

Compared to the Fiji database the only changes to the methodology include:

1. General Population

- a) Growth Rate is calculated using the log function to include the period between censuses. i.e $\text{LN}(\text{current pop} / \text{previous pop}) / 5 * 100$. (5 is the period between census)

2. Marital Status

- a) Using the marital status variable and re-classifying it to:
 - i. 'Currently Married' which includes Married and De-facto and
 - ii. 'Ever Married' which includes 'Currently Married' (i), Separated, Divorced & Widowed

3. Education

- a) Codes from the Educational Attainment question was used to determine the categories
- b) No Education = codes 00-03
- c) Primary = codes 11-19
- d) Secondary = codes 24-27
- e) Tertiary = codes 31-35
- f) Else = Other Education, code 99
- g) Proportions are calculated with reference to total population (5+ Population) as well as to the respective age group population for the different age group attainments.

4. Labor Force Participation

- a. The 'Activity' variable is used to generate the labor force
 - i. Activity = 1 is 'Wage/Salary Earner'
 - ii. Activity = 2 is 'Only Subsistence'
 - iii. Both the above (1 & 2) is 'Employed'
 - iv. Activity = 4 is 'Unemployed'
 - v. Labor Force is 1 & 2 & 4
- b. Proportions are calculated with total labor force as the reference population.

5. Fertility

- a. Table generated is for all 'Women who bore a child One Year before Census (Live Births)' by age 15-49, using the 'last child Born year of Birth from 2004-2005.'

6. Migration

- a. Data is generated using a cross tabulation of the question on the 'Place of Residence in the Last Census' by Age group. (ONLY IN-migrants available)

III. FEDERATED STATES OF MICRONESIA (FSM)

Data from the 2010 Population Census was used to update the database, but unfortunately, it was a bit difficult to determine the urban and rural areas of the country, hence, the only update done was on the Total population (National).

Methodology

1. General Population

- a) Growth Rate is calculated using the log function to include the period between censuses. i.e $LN(\text{current pop}/\text{previous pop})/10 * 100$. (10 is the period between census)

2. Marital Status

- b) Using the marital status variable and re-classifying it to:
 - i. 'Currently Married' which includes Married and
 - ii. 'Ever Married' which includes 'Currently Married' (i), Separated, Divorced & Widowed

3. Education

- a) Codes from the Educational Attainment question was used to determine the categories
- b) No Education = codes 01-08, 30
- c) Primary = codes 09-12
- d) Secondary = codes 13-14
- e) Tertiary = codes 15-20
- f) Else = Other Education
- g) Proportions are calculated with reference to total population (5+ Population) as well as to the respective age group population for the different age group attainments.

4. Labor Force Participation

- a. The variables 'Goods Produced', 'Work Usually Done' and 'Looking for Work' were used to generate the labor force
 - i. Looking for Work = 1 is 'Unemployed'
 - ii. Goods Produced = 1, 3 is 'Home Produced for Sale'
 - iii. Goods Produced = 2 is 'Only Subsistence'
 - iv. Work usually Done = 1 is 'Wage/Salary Earner'
 - v. Work usually Done = 2 is 'Wage/Salary Earner AND Home Produced'

- vi. Labor Force is SUM of all the above
- vii. Employed is Labor Force minus Unemployed
- b. Proportions are calculated with total labor force as the reference population.

5. Fertility

- c. Table generated is for all 'Women who bore a child One Year before Census (Live Births)' by age 15-49, using the 'last child Born year of Birth from 2009-2010.

6. Migration

- d. Data is generated using a cross tabulation of the question on the 'Place of Residence in the Last Census' by Age group. (ONLY IN-migrants available)

IV. MARSHALL ISLANDS

Data from the 2010 Population Census was used to update the database.

Methodology

1. General Population

- a) Growth Rate is calculated using the log function to include the period between censuses. i.e $\text{LN}(\text{current pop}/\text{previous pop})/10 * 100$. (10 is the period between census)

2. Marital Status

- c) Using the marital status variable and re-classifying it to:
 - i. 'Currently Married' which includes Married and De-facto and
 - ii. 'Ever Married' which includes 'Currently Married' (i), Separated, Divorced & Widowed

3. Education

- a) Codes from the Educational Attainment question was used to determine the categories
- b) No Education = codes 30-32
- c) Primary = codes 01-08
- d) Secondary = codes 09-12
- e) Tertiary = codes 13-19
- f) Else = Other Education

- g) Proportions are calculated with reference to total population (5+ Population) as well as to the respective age group population for the different age group attainments.

4. Labor Force Participation

- a. The variables 'Goods Produced', 'Work Usually Done' and 'Looking for Work' were used to generate the labor force
 - i. Type of Work = 1-5 AND look for Work = 1 is 'Total Labor Force'
 - ii. Type of Work = 1,2 is 'Wage & Salary'
 - iii. Type of Work = 8 is 'Subsistence'
 - iv. Type of Work = 1-5 is 'Employed'
 - v. Looking for Work = 1 is 'Unemployed'

- b. Proportions are calculated with total labor force as the reference population.

5. Fertility

- c. Table generated is for all 'Women who bore a child One Year before Census (Live Births)' by age 15-49, using the age of the 'last child Born', which is less than 0-1.

6. Migration

- d. Data is generated using a cross tabulation of the question on the 'Place of Residence in the Last Census' by Age group. (ONLY IN-migrants available)

V. PALAU

Data from the 2005 Population Census was used to update the database.

Methodology

1. General Population

- a) Growth Rate is calculated using the log function to include the period between censuses. i.e $\text{LN}(\text{current pop}/\text{previous pop})/5 * 100$. (5 is the period between censuses). There is no growth rate by sex for Urban/Rural due to unavailability of data from the previous census.

2. Marital Status

- d) Using the marital status variable and re-classifying it to:
 - i. 'Currently Married' which includes Married and De-facto and
 - ii. 'Ever Married' which includes 'Currently Married' (i), Separated, Divorced & Widowed

3. Education

- a) Codes from the Educational Attainment question was used to determine the categories
- b) No Education = codes 31-32, 98-99, 1-3
- c) Primary = codes 04-08
- d) Secondary = codes 09-12
- e) Else Tertiary
- f) Proportions are calculated with reference to total population (5+ Population) as well as to the respective age group population for the different age group attainments.

4. Labor Force Participation

- a) The variables 'Work Last Week' and 'Looking for Work' were used to generated the labor force
 - i. Type of Work = 1-3 AND look for Work = 1 is 'Total Labor Force'
 - ii. Type of Work = 1 is 'Wage & Salary'
 - iii. Type of Work = 3 is 'Subsistence'
 - iv. Type of Work = 1-2 is 'Employed'
 - v. Looking for Work = 1 is 'Unemployed'
- b. Proportions are calculated with total labor force as the reference population.

5. Fertility

- c. Table generated is for all 'Women who bore a child One Year before Census (Live Births)' by age 15-49, using the year of the 'last child Born', which is 2004 -2005.

6. Migration

- d. Data is generated using a cross tabulation of the question on the 'Place of Residence in the Last Census' by Age group. (ONLY IN-migrants available)

VI. NIUE

Data from the 2006 Population Census was used to update the database.

Methodology

1. General Population

- a) It is assumed that Alofi is the Urban area of Niue. (To be confirmed).
- b) Growth Rate is calculated using the log function to include the period between censuses. i.e $\text{LN}(\text{current pop}/\text{previous pop})/5 * 100$. (5 is the period between censuses).

2. Marital Status

- a) Using the marital status variable and re-classifying it to:
 - i. 'Currently Married' which includes Married and De-facto and
 - ii. 'Ever Married' which includes 'Currently Married' (i), Separated, Divorced & Widowed

3. Education

- g) Codes from the Educational Attainment question was used to determine the categories
- h) No Education = code 4
- i) Primary = code 1
- j) Secondary = code 2
- k) Tertiary = code 3
- l) Else code 9 (NS)
- m) Proportions are calculated with reference to total population (5+ Population) as well as to the respective age group population for the different age group attainments.

4. Labor Force Participation

- b) The variables 'Main Activity' and 'Looking for Work' were used to generated the labor force indicator.
 - i. Main Activity = 1-4 AND looking for Work = 1 is 'Total Labor Force'
 - ii. Main Activity = 1 is 'Wage & Salary'
 - iii. Main Activity = 4 is 'Subsistence'
 - iv. Main Activity = 1-3 is 'Employed'
 - v. Looking for Work = 1 is 'Unemployed'
- c) Proportions are calculated with total labor force as the reference population.

5. Fertility

- a. Table generated is for all 'Women who bore a child One Year before Census (Live Births)' by age 15-49, using the year of the 'last child Born', which is 2005 -2006.

6. Migration

- a. Data is generated using a cross tabulation of the question on the 'Where in Sept 2001' by Age group. (ONLY IN-migrants available)

VII. PAPUA NEW GUINEA

Data from the 2000 Population Census was used to update the database.

Methodology

1. General Population

- a) Growth Rate is calculated using the log function to include the period between censuses. i.e $LN(\text{current pop}/\text{previous pop})/10 * 100$.

2. Marital Status

- b. Using the marital status variable and re-classifying it to:
 - i. 'Currently Married' which includes Married and
 - ii. 'Ever Married' which includes 'Currently Married' (i), Separated, Divorced & Widowed

3. Education

- a) Codes from the Educational Attainment question was used to determine the categories. Unfortunately, the dictionary only gives categories for No Schooling, Primary, Secondary, NR and NA. Upon thorough detailed analysis, there are a big number of people in the NR and NA category which will need to be verified. It is suspected that NR and NA include the 'Tertiary' and 'Other' category of Educational Attainment. The database was only updated for the categories specified in the dictionary.
- b) No Education = code 00
- c) Primary = code 01-06
- d) Secondary = code 07-12
- e) Proportions are calculated with reference to total population (5+ Population) as well as to the respective age group population for the different age group attainments.

4. Labor Force Participation

- a) The variables 'Main Activity' and 'Looking for Work' were used to generate the labor force indicator.
 - i. Main Activity = 1-6 AND looking for Work = 1 is 'Total Labor Force'
 - ii. Main Activity = 3, 4, 6 is 'Wage & Salary'
 - iii. Main Activity = 2 is 'Subsistence'
 - iv. Main Activity = 1, 3, 4, 6 is 'Employed'
 - v. Looking for Work = 1 is 'Unemployed'
- b) Proportions are calculated with total labor force as the reference population.

5. Fertility

- c) Questionnaire does not have questions for last child born, therefore, this was not done

6. Migration

- d) This is not done as the data dictionary and the questionnaire is not clear on the place of residence for the past five years.

POPULATION AND REPRODUCTIVE HEALTH INDICATORS - NAURU 2006

Theme	Ind. No	Feature	Documentations
GENERAL POPULATION	1	Total population	Count the number of population by sex
	2	Proportion (%)	Proportion of each sex's to the pop
	3	Population growth rate (%)	Calculated by dividing the 2002 population by 2006 population multiply by 100
	4	Sex ratio	Calculated using the formula "(No Male / No Female) * 100
AGE	5	Median age	Calculated through the formula "Total Age / Total Pop"
	6	Population 0-14	The proportional populations were calculation using the standard age groups: 1. 10 to 24 Years 2. 15 to 24 Years 3. 10 to 19 years
	7	Population 15-64	
	8	Population 65+	
	9	Proportion (%) young people (10-24)	
	10	Proportion (%) youth (15-24)	Dependency Ratios were calculated using the standard age groups: 1. Young Age group: 0 - 14 Years 2. Labour Force Age group: 15 - 64 Years 3. Old Age group: 65 Years and Over
	11	Proportion (%) adolescent (10-19)	
	12	Total (age) dependency ratio	
	13	Youth dependency ratio	
	14	Old age dependency ratio	
URBAN/RURAL RATIO	15	Total population ratio	Since Nauru does not have the geoghraphical areas dividing the U ban and Rural areas, these indicators could not be calculated.
	16	Population of young people (10-24)	
	17	Youth population (15-24)	
	18	Adolescent population (10-19)	
MARITAL STATUS	Population 15+		In view of the Marital Status in the Nauru Census 2006 dataset, the marital status were "Never Married, Married, Widowed, Seperated, Divorced, Defacto, Missing and NA". Reclassification was done giving: 1. Married : - Married & Defacto 2. Ever Married: - Married, Widowed, Seperated, Divorced, Defacto
	19	Mean age at marriage (SMAM)	
	20	Proportion (%) currently married (Total Pop)	
	21	Proportion (%) ever married (Total Pop)	
	22	Proportion (%) currently married by age 15-19 years	
	23	Proportion (%) ever married by age 15-19 years	
	24	Proportion (%) currently married by age 20-24 years	
	25	Proportion (%) ever married by age 20-24 years	
	26	Proportion (%) ever married by age 15-24 years	
	27	Proportion (%) ever married by age 15-24 years	

EDUCATION Educational Attainment	Population 5+	
	28	Proportion (%) with no education (Total Pop)
	29	Proportion (%) with no education by age (15-19 years)
	30	Proportion (%) with no education by age (20-24 years)
	31	Proportion (%) with no education by age (15-24 years)
	32	Proportion (%) with primary (Total Pop)
	33	Proportion (%) with primary by age (15-19 years)
	34	Proportion (%) with primary by age (20-24 years)
	35	Proportion (%) with primary by age (15-24 years)
	36	Proportion (%) with secondary (Total Pop)
	37	Proportion (%) with secondary by age (15-19 years)
	38	Proportion (%) with secondary by age (20-24 years)
	39	Proportion (%) with secondary by age (15-24 years)
	40	Proportion (%) with tertiary (Total Pop)
	41	Proportion (%) with tertiary by age (15-19 years)
	42	Proportion (%) with tertiary by age (20-24 years)
	43	Proportion (%) with tertiary by age (15-24 years)
	44	Proportion (%) Other educ (Total Pop)
	45	Proportion (%) Other educ (15-19 years)
	46	Proportion (%) Other educ (20-24 years)
	47	Proportion (%) Other educ (15-24 years)
(includes vocational training)		
LABOUR FORCE PARTICIPATION	Population 15+	
	48	Labour force participation rate (Total Pop)
	49	Labour force participation rate (15-19 years)
	50	Labour force participation rate (20-24 years)
	51	Labour force participation rate (15-24 years)
	52	Proportion (%) working for wage/salary (Total Pop)
	53	Proportion (%) working for wage/salary (15-19 years)
	54	Proportion (%) working for wage/salary (20-24 years)
	55	Proportion (%) working for wage/salary (15-24 years)
	56	Proportion (%) Unpaid Labour / Volunteer (Total Pop)
	57	Proportion (%) Unpaid Labour / Volunteer (15-19 years)
	58	Proportion (%) Unpaid Labour / Volunteer (20-24 years)
	59	Proportion (%) Unpaid Labour / Volunteer (15-24 years)
	60	Proportion (%) Subsistence (Total Pop)
	61	Proportion (%) Subsistence (15-19 years)
	62	Proportion (%) Subsistence (20-24 years)
	63	Proportion (%) Subsistence (15-24 years)
	64	Proportion (%) census employed (Total Pop)
	65	Proportion (%) census employed (15-19 years)
	66	Proportion (%) census employed (20-24 years)
	67	Proportion (%) census employed (15-24 years)
(excludes unpaid & subsistence act)		
	68	Proportion (%) census unemployed (Total Pop)
	69	Proportion (%) census unemployed (15-19 years)
	70	Proportion (%) census unemployed (20-24 years)
	71	Proportion (%) census unemployed (15-24 years)
(actively looking for work only & available to work)		
<p>According to the Nauru 2006 Census dataset, the Educational Attainment were as follows:</p> <ol style="list-style-type: none"> 1. Achieved no education Attainment 2. Primary School 3. Secondary School 4. Tertiary School 5. Other 9. Missing NA <p>The above groups were re-classified to the following group for purpose of the Youth Database:</p> <ol style="list-style-type: none"> 1. No Attainment : - 1. Achieved no education attainment 2. Primary : - 2. Primary 3. Secondary : - 3. Secondary 4. Tertiary : - 4. tertiary 5. Other : - 5. Other - 9. Missing <p>The proportions were calculated by dividing the total population within the specified age group. The overall proportion however was calculated by dividing the population 5+ years.</p>

EDUCATION**Educational Attainment****Population 5+**

- 28 Proportion (%) with no education (Total Pop)
- 29 Proportion (%) with no education by age (15-19 years)
- 30 Proportion (%) with no education by age (20-24 years)
- 31 Proportion (%) with no education by age (15-24 years)
- 32 Proportion (%) with primary (Total Pop)
- 33 Proportion (%) with primary by age (15-19 years)
- 34 Proportion (%) with primary by age (20-24 years)
- 35 Proportion (%) with primary by age (15-24 years)
- 36 Proportion (%) with secondary (Total Pop)
- 37 Proportion (%) with secondary by age (15-19 years)
- 38 Proportion (%) with secondary by age (20-24 years)
- 39 Proportion (%) with secondary by age (15-24 years)
- 40 Proportion (%) with tertiary (Total Pop)
- 41 Proportion (%) with tertiary by age (15-19 years)
- 42 Proportion (%) with tertiary by age (20-24 years)
- 43 Proportion (%) with tertiary by age (15-24 years)
- 44 Proportion (%) Other educ (Total Pop)
- 45 Proportion (%) Other educ (15-19 years)
- 46 Proportion (%) Other educ (20-24 years)
- 47 Proportion (%) Other educ (15-24 years)

(includes vocational training and Not Stated)

According to the Vanuatu 2009 Census dataset, the Educational Attainment were as follows:

1. No School completed
2. Pre-school
3. Some Primary
4. Primary Leaving certificate
5. Form 3 certificate
6. Year 10. Leaving certificate
7. Senior Secondary cert.
8. University Entrance
9. Some college/ no deg.
10. Bachelors Degree
11. Masters Degree
12. Doctorate degree
13. Vocational
14. Others

The above groups were re-classified to the following group for purpose of the Youth Database:

1. No Attainment : 1
2. Primary : 4, 5
3. Secondary : 6, 7, 8, 9
4. Tertiary : 10, 11, 12
5. Other : 13, 14

The proportions were calculated by diving the total population within the specified age group. The overall proportion however was calculated by diving the population 5+ years.

LABOUR FORCE**Population 15+**

- 48 Number in the Labour Force (Total Pop)
- 49 Number in the Labour Force (15-19 years)
- 50 Number in the Labour Force (20-24 years)
- 51 Number in the Labour Force (15-24 years)
- 52 Labour force participation rate (Total Pop)
- 53 Labour force participation rate (15-19 years)
- 54 Labour force participation rate (20-24 years)
- 55 Labour force participation rate (15-24 years)
- 56 Proportion (%) working for wage /salary (Total Pop)
- 57 Proportion (%) working for wage /salary (15-19 years)
- 58 Proportion (%) working for wage /salary (20-24 years)
- 59 Proportion (%) working for wage /salary (15-24 years)
- 60 Proportion (%) Producing goods for sale (Total Pop)
- 61 Proportion (%) Producing goods for sale (15-19 years)
- 62 Proportion (%) producing goods for sale (20-24 years)
- 63 Proportion (%) producing goods for sale (15-24 years)
- 64 Proportion (%) subsistence only (Total Pop)
- 65 Proportion (%) subsistence only (15-19 years)
- 66 Proportion (%) subsistence only (20-24 years)
- 67 Proportion (%) subsistence only (15-24 years)
- 68 Proportion (%) Unpaid Labour (Total Pop)
- 69 Proportion (%) Unpaid Labour (15-19 years)
- 70 Proportion (%) Unpaid Labour (20-24 years)
- 71 Proportion (%) Unpaid Labour (15-24 years)
- 72 Proportion (%) census employed (Total Pop)
- 73 Proportion (%) census employed (15-19 years)
- 74 Proportion (%) census employed (20-24 years)
- 75 Proportion (%) census employed (15-24 years)
- 76 Proportion (%) census unemployed (Total Pop)
- 77 Proportion (%) census unemployed (15-19 years)
- 78 Proportion (%) census unemployed (20-24 years)
- 79 Proportion (%) census unemployed (15-24 years)

(Includes those that are employed and unemployed)

(Includes those working for wages & goods for sale)

(excludes unpaid & subsistence act)

(actively looking for work only & available to work)

In the vanuatu 2009 census dataset, the employment activities were as follows:

1. Employee - Government
2. Employee - Private
3. Employer
4. Self - Employed
5. Voluntary Work
6. Unpaid Family work
7. producing goods for sale
8. Producing goods for own consump..
9. NS

The above groups were re-classified as follows:

1. Employed in Labour Force : All of above (1-9)
2. Unemployed but in Labour Force :

(Those who did not do any work, don't have a job, actively looking for work and were available to work. i.e. P24=NO & P25=NO & P29=YES & P31=YES - Refer to Vanuatu Census 2009 dictionary)

The different employment groups were as follows:

1. Working for Wages / Salary : 1, 2, 3, 4
2. Producing goods for sale : 7
3. Subsistence : 8
4. Unpaid Labour : 5, 6

The Employment & Unemployment groups were as follows:

1. Census Employed : 1, 2, 5
2. Census unemployed : 3

The "Labour Force participation" was calculated by diving the total population employed in the specified age group over the total population 15+ years or population within the specific Youth age group.

The "Census employed/unemployed" and employment type was taken by dividing the Total Labour Force within the specified age group

DEMOGRAPHIC PROFILE

FERTILITY

These were calculated from the data taken from the census unlike the ones published which were estimates.

80	Crude birth rate
81	Total fertility rate
82	Teenage fertility (per 1000 women)
83	Age specific fertility rate
	15-19
	20-24
	25-29
	30-34
	35-39
	40-44
	45-49

For the ASFR (Age Specific Fertility Rate), I used the actual census dataset to calculate ASFR. Given the definition, the ASFR was computed by dividing total number of women in the specific age group by the number of children been born to these group of women that are 0-1 year old.

In the case of Vanuatu it is "Count of F6(0-1 Years)/Number of women within the Age group".

My figures are different from the published figure, since the published figure was calculated by Mike Levine using some other methods.

MORTALITY

84	Crude death rate
85	Life expectancy at birth
86	Infant mortality rate
87	Under 5 mortality rate
88	Maternal mortality rate

The Mortality rates as per my template were taken from the Vanuatu Census 2009 Volume 2 report.

The Mortpac Statistical application was used to compute these rates thus arriving at the published estimates.

POPULATION AND REPRODUCTIVE HEALTH INDICATORS - KINGDOM OF TONGA 2006

Theme	Ind. No	Feature	Documentations
GENERAL POPULATION	1	Total population	Count the number of population by sex
	2	Proportion (%)	Proportion of each sex's to the pop
	3	Population growth rate (%)	Calculated by dividing the 2002 population by 2006 population multiply by 100
	4	Sex ratio	Calculated using the formula "(No Male / No Female) * 100"
AGE			Calculated through the formula "Total Age / Total Pop"
	5	Median age	The proportional populations were calculation using the standard age groups: 1. 10 to 24 Years 2. 15 to 24 Years 3. 10 to 19 years
	6	Population 0-14	
	7	Population 15-64	
	8	Population 65+	
	9	Proportion (%) young people (10-24)	Dependency Ratios were calculated using the standard age groups: 1. Young Age group: 0 - 14 Years 2. Labour Force Age group: 15 - 64 Years 3. Old Age group: 65 Years and Over
	10	Proportion (%) youth (15-24)	
	11	Proportion (%) adolescent (10-19)	
	12	Total (age) dependency ratio	
	13	Youth dependency ratio	
	14	Old age dependency ratio	
URBAN/RURAL RATIO	15	Total population ratio	These indicators determine the ratio of Total population, Male, and Female between the Urban and Rural. (eg. Urban Population / Rural Population)
	16	Population of young people (10-24)	
	17	Youth population (15-24)	
	18	Adolescent population (10-19)	
MARITAL STATUS		Population 15+	In view of the Marital Status in the Tonga Census 2006 dataset, the marital status were "Never Married, Married, Widowed, Divorced/Seperated, Other, Not Stated". Reclassification was done giving: 1. Married : - Married 2. Ever Married: - Married, Widowed, Divorced/Seperated The percentages were calculated by dividing the population 15+ years and population within the various Youth Age Group .
	19	Mean age at marriage (SMAM)	
	20	Proportion (%) currently married (Total Pop)	
	21	Proportion (%) ever married (Total Pop)	
	22	Proportion (%) currently married by age 15-19 years	
	23	Proportion (%) ever married by age 15-19 years	
	24	Proportion (%) currently married by age 20-24 years	
	25	Proportion (%) ever married by age 20-24 years	
	26	Proportion (%) currently married by age 15-24 years	
	27	Proportion (%) ever married by age 15-24 years	

EDUCATION
Educational
Attainment

(includes
vocational training)

LABOUR FORCE
PARTICIPATION

(excludes unpaid
& subsistence act)

(actively looking
for work only &
available to work)

(The are people
who do house
work & collect
firewood)

Population 5+

- 28 Proportion (%) with no education (Total Pop)
- 29 Proportion (%) with no education by age (15-19 years)
- 30 Proportion (%) with no education by age (20-24 years)
- 31 Proportion (%) with no education by age (15-24 years)
- 32 Proportion (%) with primary (Total Pop)
- 33 Proportion (%) with primary by age (15-19 years)
- 34 Proportion (%) with primary by age (20-24 years)
- 35 Proportion (%) with primary by age (15-24 years)
- 36 Proportion (%) with secondary (Total Pop)
- 37 Proportion (%) with secondary by age (15-19 years)
- 38 Proportion (%) with secondary by age (20-24 years)
- 39 Proportion (%) with secondary by age (15-24 years)
- 40 Proportion (%) with tertiary (Total Pop)
- 41 Proportion (%) with tertiary by age (15-19 years)
- 42 Proportion (%) with tertiary by age (20-24 years)
- 43 Proportion (%) with tertiary by age (15-24 years)
- 44 Proportion (%) Other educ (Total Pop)
- 45 Proportion (%) Other educ (15-19 years)
- 46 Proportion (%) Other educ (20-24 years)
- 47 Proportion (%) Other educ (20-24 years)
- 48 Proportion (%) Not Stated (Total Pop)
- 49 Proportion (%) Not Stated (15-19 years)
- 50 Proportion (%) Not Stated (20-24 years)
- 51 Proportion (%) Not Stated (15-24 years)

Population 15+

- 52 Labour force participation rate (Total Pop)
- 53 Labour force participation rate (15-19 years)
- 54 Labour force participation rate (20-24 years)
- 55 Labour force participation rate (15-24 years)
- 56 Proportion (%) working for wage/salary (Total Pop)
- 57 Proportion (%) working for wage/salary (15-19 years)
- 58 Proportion (%) working for wage/salary (20-24 years)
- 59 Proportion (%) working for wage/salary (15-24 years)
- 60 Proportion (%) Producing Goods for Sale (Total Pop)
- 61 Proportion (%) Producing Goods for Sale (15-19 years)
- 62 Proportion (%) Producing Goods for Sale (20-24 years)
- 63 Proportion (%) Producing Goods for Sale (15-24 years)
- 64 Proportion (%) subsistence only (Total Pop)
- 65 Proportion (%) subsistence only (15-19 years)
- 66 Proportion (%) subsistence only (20-24 years)
- 67 Proportion (%) subsistence only (15-24 years)
- 68 Proportion (%) Other & Not Stated (Total Pop)
- 69 Proportion (%) Other & Not Stated (15-19 years)
- 70 Proportion (%) Other & Not Stated (20-24 years)
- 71 Proportion (%) Other & Not Stated (15-24 years)
- 72 Proportion (%) census employed (Total Pop)
- 73 Proportion (%) census employed (15-19 years)
- 74 Proportion (%) census employed (20-24 years)
- 75 Proportion (%) census employed (15-24 years)
- 76 Proportion (%) census unemployed (Total Pop)
- 77 Proportion (%) census unemployed (15-19 years)
- 78 Proportion (%) census unemployed (20-24 years)
- 79 Proportion (%) census unemployed (15-24 years)
- 80 Proportion (%) home duties (Total Pop)
- 81 Proportion (%) home duties (15-19 years)
- 82 Proportion (%) home duties (20-24 years)
- 83 Proportion (%) home duties (15-24 years)

According to the Tonga 2006 Census dataset, the Educational Attainment were as follows:

- | | |
|---|---------------------------------|
| 1 Still in Primary school | 2 Still study |
| 3 Previous studied but never completed | 4 Never studied |
| 5 Pass entry to secondary school | 6 Unclassified qualification |
| 7 Lower & Higher Living SC (F/IV) | 8 TSSC (F/ V) |
| 9 PSSC (F/VI) | 10 Form IV Bursary |
| 11 Post Secondary Certificate / Diploma | 12 Technical Cert / Diploma |
| 13 Nursing Cert | 14 Teaching Cert / Diploma |
| 15 Theology Cert / Diploma | 16 Medical Doctors |
| 17 University's Bachelors degree | 18 University Postgrade Diploma |
| 19 University's Master degree | 20 University PhD degree |
| 21 Other - formal qualification | 99 Not stated |

The above groups were re-classified to the following group for purpose of the Youth Database:

- | | |
|------------------|-----------------------------|
| 1. No Attainment | : 1,2,3,4 |
| 2. Primary | : 5 |
| 3. Secondary | : 7, 8, 9, 10 |
| 4. Tertiary | : 16, 17, 18, 19, 20 |
| 5. Other | : 11, 12, 13, 14, 15, 6, 21 |
| 6. Not Stated | : 99 |

The proportions were calculated by diving the total population within the specified age group. The overall proportion however was calculated by diving the population 5+ years.

In the Tongan 2006 census dataset, the employment activities were a follows:

- | | |
|---------------------------------------|-------------------------------|
| 1. Work for pay or operating business | 2. Farmin mainly for sale |
| 3. Fishing mainly for sale | 4. Handicrafts maily for sale |
| 5. Farming maily for own consumption | |
| 6. Fishing mainly for own consumption | |
| 7. Handicrafts own consumption | 8. Othertype of work |
| 9. Not Stated | |

The above groups were re-classified as follows:

- | | |
|-------------------------------------|----------------------|
| 1. Employed in Labour Force | : All of above (1-9) |
| 2. Unemployed but in Labour Force : | |

(Those who did not do any work, don't have a job, actively looking f work and were available to work. i.e. P17=NO & P18=NO & P23=YES & P25=YES - Refer to Tongan Census 2006 dictionary)

The different employment groups were as follows:

- | | |
|-------------------------------|-----------|
| 1. Working for Wages / Salary | : 1 |
| 2. Producing goods for sale | : 2, 3, 4 |
| 3. Subsistence | : 5, 6, 7 |
| 4. Other & Not Stated | : 8, 9 |

The Employment & Unemployment groups were as follows:

- | | |
|----------------------|---|
| 1. Census Employed | : 1, 2, 3, 4, 5, 6, 7, 8, 9 |
| 2. Census unemployed | : Refer to above explanation of unemployed Labour Force |

The "Labour Force participation" was calculated by diving the total population employed in the specified age group over the total population 15+ years or population within the specific Youth age group.

The "Census employed/ unemployed" and employment type rates were taken by dividing the Total Labour Force within the specified aj group

POPULATION AND REPRODUCTIVE HEALTH INDICATORS - TUVALU 2002

Theme	Ind. Feature No	Documentations
GENERAL POPULATION	1 Total population	Count the number of population by sex
	2 Proportion (%)	Proportion of each sex's to the population
	3 Population growth rate (%)	Calculated by dividing the 1991 population by 2002 population multiply by 100
	4 Sex ratio	Calculated using the formula "(No Male / No Female) * 100"
AGE	5 Median age	Calculated through the formula "Total Age / Total Pop"
	6 Population 0-14	
	7 Population 15-64	
	8 Population 65+

	25 Proportion (%) ever married by age 20-24 years	
	26 Proportion (%) currently married by age 15-24 years	
	27 Proportion (%) ever married by age 15-24 years	

EDUCATION
Educational
Attainment

Population 5+

- 26 Proportion (%) with no education (Total Pop)
- 27 Proportion (%) with no education by age (15-19 years)
- 28 Proportion (%) with no education by age (20-24 years)
- 29 Proportion (%) with no education by age (15-24 years)
- 30 Proportion (%) with primary (Total Pop)
- 31 Proportion (%) with primary by age (15-19 years)
- 32 Proportion (%) with primary by age (20-24 years)
- 33 Proportion (%) with primary by age (15-24 years)
- 34 Proportion (%) with secondary (Total Pop)
- 35 Proportion (%) with secondary by age (15-19 years)
- 36 Proportion (%) with secondary by age (20-24 years)
- 37 Proportion (%) with secondary by age (15-24 years)
- 38 Proportion (%) with tertiary (Total Pop)
- 39 Proportion (%) with tertiary by age (15-19 years)
- 40 Proportion (%) with tertiary by age (20-24 years)
- 41 Proportion (%) with tertiary by age (15-24 years)
- 42 Proportion (%) Other educ (Total Pop)
- 43 Proportion (%) Other educ (15-19 years)
- 44 Proportion (%) Other educ (20-24 years)
- 45 Proportion (%) Other educ (15-24 years)

(includes
vocational training)

According to the Tuvalu 2006 Census dataset, the Educational Attainment were as follows:

- | | |
|----------------------------|---------------------------------------|
| 1. No Qualification | 2. Primary School Leaving Certificate |
| 3. Fiji Junior certificate | 4. Form 5/6/7 certificate |
| 5. Other certificate | 6. Diploma |
| 7. Degree | 8. Other |

The above groups were re-classified to the following group for purpose of the Youth Database:

- | | |
|------------------|--------|
| 1. No Attainment | : 1 |
| 2. Primary | : 2 |
| 3. Secondary | : 3, 4 |
| 4. Tertiary | : 6, 7 |
| 5. Other | : 5, 8 |

The proportions were calculated by dividing the total population within the specified age group. The overall proportion however was calculated by dividing the population 5+ years.

LABOUR FORCE
PARTICIPATION

Population 15+

- 41 Number in the Labour Force (Total Pop)
- 42 Number in the Labour Force (15-19 years)
- 43 Number in the Labour Force (20-24 years)
- 44 Number in the Labour Force (15-24 years)
- 45 Labour force participation rate (Total Pop)
- 46 Labour force participation rate (15-19 years)
- 47 Labour force participation rate (20-24 years)
- 48 Labour force participation rate (15-24 years)
- 49 Proportion (%) working for wage/salary (Total Pop)

- 71 Proportion (%) census employed (20-24 years)
- 72 Proportion (%) census employed (15-24 years)
- 73 Proportion (%) census unemployed (Total Pop)
- 74 Proportion (%) census unemployed (15-19 years)
- 75 Proportion (%) census unemployed (20-24 years)
- 76 Proportion (%) census unemployed (15-24 years)

(excludes
subsistence act)

(actively looking
for work only)

In the Tuvalu 2006 census dataset, the employment activities were as follows:

- | | |
|------------------|----------------------------|
| 1. An employee | 2. An employer |
| 3. Self-employed | 4. An unpaid Family worker |
| 5. Other | |

Other Labour force indicators were taken from separate variable crop, Livestock, Handcrafts & Fishing.

The above groups were re-classified as follows:

- | | |
|-----------------------------|--|
| 1. Employed in Labour Force | : 1,2,3,4,5 and crop,livestock
handcrafts,fishing |
|-----------------------------|--|

2. Unemployed but in Labour Force :

(Those who did not do any work, don't have a job, actively look for work and were available to work. i.e. P19=4 (No Work) & P2 (Not temporarily on leave) & P26=1 (Yes Actively look for work) Refer to Tuvalu Census 2006 dictionary)

The different employment groups were as follows:

- | | |
|---------------------------------|--|
| 1. Working for Wages / Salary | : 1, 2, 3 |
| 2. Subsistence Only | : crop, livestock, handcrafts
fishing for consumption on |
| 3. Producing goods for sale | : crop, livestock,
handcrafts, fishing for sale |
| 4. Goods for sale & consumption | : crop, livestock, handcrafts
fishing for sale & consumpt |
| 5. Unpaid Labour or Other | : 4, 5 |

The Employment & Unemployment groups were as follows:

- | | |
|----------------------|--|
| 1. Census Employed | : 1, 2, 3, 4 & crops, fish, lives
handcrafts for sale |
| 2. Census unemployed | : Refer to above unemployr |

The "Labour Force participation" was calculated by dividing the total population employed in the specified age group over the total population 15+ years or population within the specific Youth age group.

The "Census employed/ unemployed" and employment type was taken by dividing the Total Labour Force within the specified age group

DEMOGRAPHIC PROFILE

FERTILITY

- 77 Crude birth rate
- 78 Total fertility rate
- 79 Teenage fertility (per 1000 women)
- 80 Age specific fertility rate
 - 15-19
 - 20-24
 - 25-29
 - 30-34
 - 35-39
 - 40-44
 - 45-49

The Age Specific Fertility Rate in the Tuvalu Youth database was calculated by Mr. Andreas Damnake based on estimations.

The variables needed to derive the indicators were not included in the Tuvalu 2006 census dictionary and not even on the Questionnaires.

MORTALITY

- 81 Crude death rate
- 82 Life expectancy at birth
- 83 Infant mortality rate
- 84 Under 5 mortality rate
- 85 Maternal mortality rate

MIGRATION

Population 5+

(residence/5 years)

- 86 Crude net-migration - number (1997-2002)
- 87 5 year crude net-migration rate (per 1000)
- 88 Annual crude net-migration rate (per 1000)
- 89 Rate of urbanisation
- 90 5 year crude net-migration rate (15-19 years)
- 91 Annual crude net-migration rate (15-19 years)
- 92 5 year crude net-migration rate (20-24 years)
- 93 Annual crude net-migration rate (20-24 years)

POPULATION AND REPRODUCTIVE HEALTH INDICATORS - SOLOMON ISLANDS 2009

Theme	Ind. No.	Feature	Documentations
GENERAL POPULATION	1	Total population	Count the number of population by sex
	2	Proportion (%)	Proportion of each sex's to the pop
	3	Population growth rate (%)	Calculated by dividing the 1999 population by 2009 population multiply by 100
	4	Sex ratio	Calculated using the formula "(No Male / No Female) * 100"
AGE	5	Median age	Calculated through the formula "Total Age / Total Pop"
	6	Population 0-14	The proportional populations were calculation using the standard age groups: 1. 10 to 24 Years 2. 15 to 24 Years 3. 10 to 19 years
	7	Population 15-64	
	8	Population 65+	
	9	Proportion (%) young people (10-24)	Dependency Ratios were calculated using the standard age groups: 1. Young Age group : 0 - 14 Years 2. Labour Force Age group: 15 - 64 Years 3. Old Age group: 65 Years and Over
	10	Proportion (%) youth (15-24)	
	11	Proportion (%) adolescent (10-19)	
	12	Total (age) dependency ratio	These indicators determine the ratio of Total population, Male, and Female between the Urban and Rural. (eg. Urban Population / Rural Population)
	13	Youth dependency ratio	
	14	Old age dependency ratio	
URBAN/RURAL RATIO	15	Total population ratio	
	16	Population of young people (10-24)	
	17	Youth population (15-24)	
	18	Adolescent population (10-19)	
MARITAL STATUS		Population 15+	In view of the Marital Status in the Solomon Islands Census 2009 dataset, the marital status were "Never Married, Married, Custom, Divorced, Seperated, Widowed". Reclassification was done giving: 1. Married : - Married & Custom 2. Ever Married: - Married, Custome, Widowed, Seperated, Divirced The percentages were calculated by dividing the population 15+ years and population within the various specified age groups.
	19	Mean age at marriage (SMAM)	
	20	Proportion (%) currently married (Total Pop)	
	21	Proportion (%) ever married (Total Pop)	
	22	Proportion (%) currently married by age 15-19 years	
	23	Proportion (%) ever married by age 15-19 years	
	24	Proportion (%) currently married by age 20-24 years	
	25	Proportion (%) ever married by age 20-24 years	
	26	Proportion (%) currently married by age 15-24 years	
	27	Proportion (%) ever married by age 15-24 years	

EDUCATION

Educational Attainment

Population 5+

- 28 Proportion (%) with no education (Total Pop)
- 29 Proportion (%) with no education by age (15-19 years)
- 30 Proportion (%) with no education by age (20-24 years)
- 31 Proportion (%) with no education by age (15-24 years)
- 32 Proportion (%) with primary (Total Pop)
- 33 Proportion (%) with primary by age (15-19 years)
- 34 Proportion (%) with primary by age (20-24 years)
- 35 Proportion (%) with primary by age (15-24 years)
- 36 Proportion (%) with secondary (Total Pop)
- 37 Proportion (%) with secondary by age (15-19 years)
- 38 Proportion (%) with secondary by age (20-24 years)
- 39 Proportion (%) with secondary by age (15-24 years)
- 40 Proportion (%) with tertiary (Total Pop)
- 41 Proportion (%) with tertiary by age (15-19 years)
- 42 Proportion (%) with tertiary by age (20-24 years)
- 43 Proportion (%) with tertiary by age (15-24 years)
- 44 Proportion (%) with other vocational (Total Pop)
- 45 Proportion (%) with Other vocational by age (15-19 years)
- 46 Proportion (%) with Other vocational by age (20-24 years)
- 47 Proportion (%) with Other vocational by age (15-24 years)

LABOUR FORCE

Population 15+

- 48 Number in the Labour Force (Total Pop)
- 49 Number in the Labour Force (15-19 years)
- 50 Number in the Labour Force (20-24 years)
- 51 Number in the Labour Force (15-24 years)
- 52 Labour force participation rate (Total Pop)
- 53 Labour force participation rate (15-19 years)
- 54 Labour force participation rate (20-24 years)
- 55 Labour force participation rate (15-24 years)
- 56 Proportion (%) working for wage/salary (Total Pop)
- 57 Proportion (%) working for wage/salary (15-19 years)
- 58 Proportion (%) working for wage/salary (20-24 years)
- 59 Proportion (%) working for wage/salary (15-24 years)
- 60 Proportion (%) Producing goods for sale (Total Pop)
- 61 Proportion (%) Producing goods for sale (15-19 years)
- 62 Proportion (%) Producing goods for sale (20-24 years)
- 63 Proportion (%) Producing goods for sale (15-24 years)
- 64 Proportion (%) Unpaid Labour (Total Pop)
- 65 Proportion (%) Unpaid Labour (15-19 years)
- 66 Proportion (%) Unpaid Labour (20-24 years)
- 67 Proportion (%) Unpaid Labour (15-24 years)
- 68 Proportion (%) subsistence only (Total Pop)
- 69 Proportion (%) subsistence only (15-19 years)
- 70 Proportion (%) subsistence only (20-24 years)
- 71 Proportion (%) subsistence only (15-24 years)
- 72 Proportion (%) census employed (Total Pop)
- 73 Proportion (%) census employed (15-19 years)
- 74 Proportion (%) census employed (20-24 years)
- 75 Proportion (%) census employed (15-24 years)
- 76 Proportion (%) census unemployed (Total Pop)
- 77 Proportion (%) census unemployed (15-19 years)
- 78 Proportion (%) census unemployed (20-24 years)
- 79 Proportion (%) census unemployed (15-24 years)

(excludes unpaid
& subsistence act)

(actively looking
for work only &
available to work)

According to the Vanuatu 2009 Census dataset, the Educational Attainment were as follows:

- | | |
|---------------------------|----------------------|
| 1. No School completed | 2. Pre-school |
| 3. Some Primary | 4. Completed Primary |
| 5. Completed Form 3 | 6. Completed Form 5 |
| 7. Completed Form 6 | 8. Completed Form 7 |
| 9. Some college/ no deg.. | 10. Bachelors Degree |
| 11. Masters Degree | 12. Doctorate degree |
| 13. Vocational | 14. Others |

The above groups were re-classified to the following group for purpose of the Youth Database:

- | | |
|------------------|-----------------|
| 1. No Attainment | : 1, 2 |
| 2. Primary | : 3, 4 |
| 3. Secondary | : 5, 6, 7, 8, 9 |
| 4. Tertiary | : 9, 10, 11, 12 |
| 5. Other | : 13, 14 |

The proportions were calculated by dividing the total population within the specified age group. The overall proportion however was calculated by dividing the population 5+ years.

NB: I take Some College but no degree as Tertiary since it could mean University certificate or diploma.

In the vanuatu 2009 census dataset, the employment activities were as follows:

- | | |
|-----------------------------|--------------------------------------|
| 1. Employee (gov) | 2. Employee (Priv) |
| 3. Employer | 4. Self - Employed |
| 5. Voluntary Work | 6. Unpaid Family work |
| 7. producing goods for sale | 8. Producing goods for own consump.. |

The above groups were re-classified as follows:

- | | |
|-------------------------------------|----------------------|
| 1. Employed in Labour Force | : All of above (1-8) |
| 2. Unemployed but in Labour Force : | |

(Those who did not do any work, don't have a job, actively looking for work and were available to work. i.e. P20=NO & P21=NO & P25=YES & P27=YES - Refer to Solomon Islands Census 2009 dictionary)

The different employment groups were as follows:

- | | |
|------------------------------|--------------|
| 1. Working for Wages/ Salary | : 1, 2, 3, 4 |
| 2. Producing goods for sale | : 7 |
| 3. Subsistence | : 8 |
| 4. Unpaid Labour | : 5, 6 |

The Employment & Unemployment groups were as follows:

- | | |
|----------------------|---|
| 1. Census Employed | : 1, 2, 3, 4, 5 |
| 2. Census unemployed | : Refer to above unemployment group determination |

The "Labour Force participation" was calculated by dividing the total population employed in the specified age group over the total population 15+ years or population within the specific Youth age group.

The "Census employed/ unemployed" and employment type was taken by dividing the Total Labour Force within the specified age group

DEMOGRAPHIC PROFILE

FERTILITY

<i>(These figures were computed from the dataset provided. They may be different from the published figures)</i>	80	Crude birth rate	
	81	Total fertility rate	
	82	Teenage fertility (per 1000 women)	
	83	Age specific fertility rate	
			15-19
			20-24
			25-29
			30-34
			35-39
			40-44
			45-49

For the ASFR (Age Specific Fertility Rate), I used the actual census dataset to calculate ASFR. Given the definition, the ASFR was computed by dividing total number of women in the specific age group by the number of children been born to these group of women that are 0-1 year old.

In the case of Solomon Islands it is the "Count of F5(0-1 Years)/Number of women within the Age group".

MORTALITY

84	Crude death rate
85	Life expectancy at birth
86	Infant mortality rate
87	Under 5 mortality rate
88	Maternal mortality rate

POPULATION AND REPRODUCTIVE HEALTH INDICATORS - COOK ISLANDS 2006

Theme	Ind. Feature	Documentations
	No.	
GENERAL POPULATION	1 Total population 2 Proportion (%) 3 Population growth rate (%) 4 Sex ratio	Count the number of population by sex Proportion of each sex's to the pop Calculated by dividing the 2001 population by 2006 population multiply by 100 Calculated using the formula "(No Male / No Female) * 100"
AGE	5 Median age 6 Population 0-14 7 Population 15-64 8 Population 65+ 9 Proportion (%) young people (10-24) 10 Proportion (%) youth (15-24) 11 Proportion (%) adolescent (10-19) 12 Total (age) dependency ratio 13 Youth dependency ratio 14 Old age dependency ratio	Calculated through the formula "Total Age / Total Pop" <div>The proportional populations were calculation using the standard age groups: 1. 10 to 24 Years 2. 15 to 24 Years 3. 10 to 19 years</div> <div>Dependency Ratios were calculated using the standard age groups: 1. Young Age group : 0 - 14 Years 2. Labour Force Age group: 15 - 64 Years 3. Old Age group: 65 Years and Over</div>
URBAN/RURAL RATIO	15 Total population ratio 16 Population of young people (10-24) 17 Youth population (15-24) 18 Adolescent population (10-19)	<div>These indicators determine the ratio of Total population, Male, and Female between the Urban and Rural. The Urban Area in this case is derived from areas in and around Rarotonga (CD 0-11). (eg. Urban Population / Rural Population)</div>
MARITAL STATUS	Population 15+ 19 Mean age at marriage (SMAM) 20 Proportion (%) currently married (Total Pop) 21 Proportion (%) ever married (Total Pop) 22 Proportion (%) currently married by age 15-19 years 23 Proportion (%) ever married by age 15-19 years 24 Proportion (%) currently married by age 20-24 years 25 Proportion (%) ever married by age 20-24 years 26 Proportion (%) currently married by age 15-24 years 27 Proportion (%) ever married by age 15-24 years	<div>In view of the Marital Status in the Cook Islands Census 2002 dataset, the marital status were "Never Married, Married, Separated from Partner, Divorced, Defacto, Not Stated". Reclassification was done giving: 1. Married : - Married & Defacto 2. Ever Married: - Married, Widowed, Seperated, Divorced, Defacto The percentages were calculated by dividing the population 15+ years and population within the various specified age groups.</div>

EDUCATION
Educational
Attainment

Population 5+	
26	Proportion (%) with no education (Total Pop)
27	Proportion (%) with no education by age (15-19 years)
28	Proportion (%) with no education by age (20-24 years)
29	Proportion (%) with no education by age (15-24 years)
30	Proportion (%) with primary (Total Pop)
31	Proportion (%) with primary by age (15-19 years)
32	Proportion (%) with primary by age (20-24 years)
33	Proportion (%) with primary by age (15-24 years)
34	Proportion (%) with secondary (Total Pop)
35	Proportion (%) with secondary by age (15-19 years)
36	Proportion (%) with secondary by age (20-24 years)
37	Proportion (%) with secondary by age (15-24 years)
38	Proportion (%) with tertiary (Total Pop)
39	Proportion (%) with tertiary by age (15-19 years)
40	Proportion (%) with tertiary by age (20-24 years)
41	Proportion (%) with tertiary by age (15-24 years)
42	Proportion (%) with other vocational (Total Pop)
43	Proportion (%) with Other vocational by age (15-19 years)
44	Proportion (%) with Other vocational by age (20-24 years)
45	Proportion (%) with Other vocational by age (15-24 years)

The highest level of Education Attainment was a bit complicated to derived because several variables were used to compute the Attainments:

1. Question P11C was used to calculate the Level of Primary and Secondary completed
2. Question P11E was used to calculate the Level of Tertiary and Other Qualifications.

It is best that next time the Level of Education Attainment be captured through just one variable.

LABOUR FORCE

Population 15+	
46	Number in the Labour Force (Total Pop)
47	Number in the Labour Force (15-19 years)
48	Number in the Labour Force (20-24 years)
49	Number in the Labour Force (15-24 years)
50	Labour force participation rate (Total Pop)
51	Labour force participation rate (15-19 years)
52	Labour force participation rate (20-24 years)
53	Labour force participation rate (15-24 years)
54	Proportion (%) working for wage/salary (Total Pop)
55	Proportion (%) working for wage/salary (15-19 years)
56	Proportion (%) working for wage/salary (20-24 years)
57	Proportion (%) working for wage/salary (15-24 years)
58	Proportion (%) Home Duties (Total Pop)
59	Proportion (%) Home Duties (15-19 years)
60	Proportion (%) Home Duties (20-24 years)
61	Proportion (%) Home Duties (15-24 years)
62	Proportion (%) Unpaid Labour (Total Pop)
63	Proportion (%) Unpaid Labour (15-19 years)
64	Proportion (%) Unpaid Labour (20-24 years)
65	Proportion (%) Unpaid Labour (15-24 years)
66	Proportion (%) Others (Total Pop)
67	Proportion (%) Others (15-19 years)
68	Proportion (%) Others (20-24 years)
69	Proportion (%) Others (15-24 years)
70	Proportion (%) census employed (Total Pop)
71	Proportion (%) census employed (15-19 years)
72	Proportion (%) census employed (20-24 years)
73	Proportion (%) census employed (15-24 years)
74	Proportion (%) census unemployed (Total Pop)
75	Proportion (%) census unemployed (15-19 years)
76	Proportion (%) census unemployed (20-24 years)
77	Proportion (%) census unemployed (15-24 years)

(excludes unpaid
& Home duties act)

(actively looking
for work only &
available to work)

In the vanuatu 2009 census dataset, the employment activities were as follows:

1. Employer own business without employees
2. Employer own business with employees
3. Working full time for wages/salary
4. Working part time for wages/salary
5. Unpaid family worker in plantation/store/business
6. Full times students
7. Unemployed
8. Home Duties
9. Retired
0. No activity

The above groups were re-classified as follows:

1. Employed in Labour Force : 1,2,3,4,5
2. Unemployed but in Labour Force :

(Those who did not do any work, don't have a job and will work, given the opportunity. i.e. P18A=NO & P18C=YES - Refer to Cook Islands Census 2006 dictionary or Questionnaire)

The different employment groups were as follows:

1. Working for Wages / Salary : 1, 2, 3, 4
2. Unpaid Labour / Family work : 5
3. Home Duties : 8
4. Other & Not Stated : 7, 9

NB: Sustiance and Producing goods were not captured in the census

The Employment & Unemployment groups were as follows:

1. Census Employed : 1, 2, 3,4,5
2. Census unemployed : Refer to above definition

The "Labour Force participation" was calculated by diving the total population employed in the specified age group over the total population 15+ years or population within the specific Youth age group.

The "Census employed/unemployed" and employment type was taken by dividing the Total Labour Force within the specified age group.

DEMOGRAPHIC PROFILE

FERTILITY

78	Crude birth rate
79	Total fertility rate
80	Teenage fertility (per 1000 women)
81	Age specific fertility rate
	15-19
	20-24
	25-29
	30-34
	35-39
	40-44
	45-49

For the ASFR (Age Specific Fertility Rate), I used the actual census dataset to calculate ASFR. Given the definition, the ASFR was computed by dividing total number of women in the specific age group by the number of children been born to these group of women that are 0-1 year old.

In the case of Cook Islands it is the "Count of last child (0-1 Years)/Number of women within the Age group".

My figures are different from the published figures, since my figures were calculated directly from the Cook Islands Census 2006 dataset.

POPULATION AND REPRODUCTIVE HEALTH INDICATORS - SAMOA 2006

Theme	Ind. Feature No	Documentations
GENERAL	1 Total population	Count the number of population by sex
POPULATION	2 Proportion (%)	Proportion of each sex's to the pop
	3 Population growth rate (%)	Calculated by dividing the 2001 population by 2006 population multiply by 100
	4 Sex ratio	Calculated using the formula "(No Male / No Female) * 100"

- 76 Proportion (%) census unemployed (20-24 years)
- 77 Proportion (%) census unemployed (15-24 years)

(excludes
subsistence act)

(actively looking
for work only)

According to the Samoa 2006 Census dataset, the Educational Attainment were as follows:

- 0. Completed some education at Special Schools
- 1. Never attended school in lifetime
- 2. Completed some read/write classes held by missionaries/faifeau
- 3. Completed Kindergarten level
- 4. Completed Primer 1
- 5. Completed Primer 2
- 6. Completed Primer 3
- 7. Completed Std 1/2
- 8. Completed Std 3
- 9. Completed Std 4
- 10. Completed Form 1
- 11. Completed Form 2
- 12. Completed Form 3
- 13. Completed Form 4
- 14. Completed Form 5
- 15. Completed Upper 5 (Yr 12)
- 16. Completed Form 6 (Yr 13)
- 17. Completed Form 7, UPY
- 18. Finished some courses at Post-Secondary
- 19. Finished some courses at Universities
- 20. Graduated from Post-Secondary Institution
- 21. Graduated from Universities Institution
- 99. NS

The above groups were re-classified to the following group for purpose of the Youth Database:

- 1. No Attainment : 1
- 2. Primary : 9
