The monetary base includes central-bank-issued currency that is included in the monetary aggregates, but it also includes at least two components that are excluded from the monetary aggregates—namely, other depository corporations' deposit holdings at the central bank and their holdings of national currency.

Box 6.2. The Monetary Base: Representative Components 1/ **Currency in circulation** 2/

Central bank liabilities to other depository corporations

Transferable deposits (required reserves and clearing balances)

Other deposits

Securities issued by the central bank 3/

Central bank liabilities included in broad money

Transferable deposits

Other deposits

Central bank securities included in broad money

1/ Broader or narrower definitions of the monetary base may be used in the national context.

2/ Normally comprises currency holdings of all subsectors other than the central bank. In particular, the holdings of the central government, all financial corporations other than the central bank, and nonresidents are usually included along with the holdings of the other sectors. The currency component of the monetary base in the *CBS*, described in Chapter 7, includes only the national currency issued by the central bank. The currency component of the monetary base in a monetary authorities account, described in Chapter 7, would also include any currency issued by the central government.

3/ If holdings of these securities can be used in satisfying reserve requirements, they are included in the monetary base. Otherwise, such holdings are included or excluded, depending on the specific formulation and analytical use of the monetary base.
