## FOREWORD

The National Statistics Office (VNSO) is pleased to release the official tables and summary of key findings from the 2016 Mini-Census supported by the Government of Vanuatu. The planning and execution of the Mini-Census beginning in June 2016 with the launch and fieldwork in November 2016. It is a basic household and population count to update the household list as well as an opportunity to collect basic progress indicators of the government policies and services.

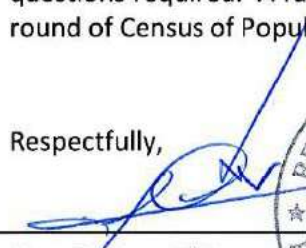

In this report, data is released at Area council level. The decision to release such detail information is based on the increase demand for sub provincial data, as well as the need to empower decisions at this level. Unlike island level data, area councils are the official administrative boundaries at the sub provincial level. Further information related to disaster preparedness and response is available in this release. This includes the areas of water, sanitation, telecommunication and many more.

These changes are the combined result of natural disasters including Tropical Cyclone Pam and the subsequent El Nino drought effects, as well as population growth and urban migration trends. The updated national household listing will improve the information available to assist with disaster preparedness and response. Furthermore, an updated household listing will ensure improved sampling – and hence, improved accuracy of analysis – of future household surveys planned for more in-depth data collection, such as income and expenditure surveys or demographic health surveys.

The mini census is historical in many ways. It is the first time VNSO has ever conducted a Mini Census, the use of ICT devices to collect information and submit over the internet, the operation being fully funded by the Vanuatu government, the data processing and report writing done solely by VNSO staff, and to be able to release the final output within 6 months after fieldwork. This is an indication commitment and recognition for data for evidence based decision making. It also indicates the level of maturity and the technical and professional capacity the office has developed over the years to carryout such massive exercise.

We were also pleased with the level of support we received from civil society during the undertaking of this Mini-Census. In nearly all parts of the country, our interviewers were treated with respect and individuals took the time to answer the questions required. A full census with more in-depth questioning is planned for 2020 round of Census of Population and Housing.

Respectfully,

  
Hon. Gaetan Piklouné (MP)  
Minister  
Ministry of Finance and Economic Management  
Government of Vanuatu

## ACKNOWLEDGEMENTS

The Vanuatu National Statistics Office would like to give special thanks and acknowledgement to the following:

- The VNSO staff for their commitment and working tirelessly to ensure this output is released in a timely manner
- The Vanuatu Government through the Ministry of Finance and Economic Management for allocating funds towards this national exercise
- Digicel Vanuatu for working with us to trial the Computer Assisted Personal Interview (CAPI) technology based data entry software and for supporting communications of fieldwork;
- The Secretariat of the Pacific Community (SPC) Statistics for Development Division (SDD) for technical support in CAPI training;
- World Bank Group for technical support in CAPI;
- Department of Local Authorities and all of the Area Council Secretaries engaged in data collection and fieldwork oversight;
- Provincial Authorities and community leaders for assisting with publicity and awareness;
- Air Vanuatu and shipping and marine transport services used during training and field operations ; and
- All citizens and residents of Vanuatu who have participated in this nationwide undertaking, and
- Last but not the least, the hardworking field enumerators, supervisors, headquarter staff of the mini census

CONCEPT	DEFINITION
Dwelling	A dwelling is any building or structure – or its parts – that is used, or intended to be used, for human habitation. Dwellings can be permanent or temporary and include structures such as houses, motels, hotels, prisons, motor homes, huts, and tents.
Head of Household	Is an adult person who usually makes the final or most household decisions. It does not necessarily refer to the sole bread winner, or the most senior person or being male. It must be someone who is a usual member of the household
Household (private)	A household is defined as “Those persons who usually eat together and share the work of preparing the food and/or the cost of work of providing it”. A household can also be an individual person without combining with other persons. A household may be found in a variety of forms. It may spread over more than one building. Members of a family may sleep in two or even more buildings but share one place to cook and eat.
Household size	an average measure obtained by dividing the number of people in households of a given area by the total number of households in the area
Institution (Non Private Household)	an organization providing specified services or performing some general public function for a group of residents or inmates who will normally be unrelated to each other. Institutions or sometimes refer to as collective households or non-private dwellings such as hospitals, schools, prisons, hotels, bible college, guest house etc.
Improved Sanitation	Sanitation defines "improved" sanitation as the following kind of toilets:
(Unicef/WHO definition)	Flush toilet
	water seal
	Ventilated improved pit latrine (abbreviated as VIP latrine)
	Pit latrine with slab
	Composting toilet
	Any of the above that is "shared" are NOT counted as improved sanitation, including that of open pit latrine and no toilet facilities
Improved drinking water	An improved drinking-water source is defined as one that, by nature of its construction or through active intervention, is likely to be protected from outside contamination, in particular from contamination with faecal matter.
(Unicef/WHO definition)	Any water source or storage that is unprotected, uncovered or shared by other household is considered unimproved.
Own Account	work done on their own without hiring other non-member of the household, include the type of job defined as "a self-employment job" and have not engaged on a continuous basis any "employees" to work for them during the reference period
Median age	the age that divides a population into two numerically equal groups - that is, half the people are younger than this age and half are older. It is a single index that summarizes the age distribution of a population.
Person	any individual member of the household or institution who is present on the census night and is therefore counted in the census. This includes everyone: young and old, male of female, expatriates or residents, tourist and locals alike. For census purposes, the term “person” denotes each individual falling within the scope of census. A person can be identified as belonging to the household population or to the institutional population where he or she slept on the night
Value added activities	the improvement of any primary product by household for purpose of selling, usually a transformation from its original content to a valuable one. e.g. From raw to manufactured such as coconut to oil, wood to carving, solid to liquid etc.
