

# HOUSEHOLD INCOME AND EXPENDITURE SURVEY 2005/6

## NATIONAL REPORT

(PART ONE)

Solomon Islands Statistics Office  
Department of Finance and Treasury

Honiara, September 2006

---

# Foreword

---

On behalf of the Government of the Solomon Islands, it is a pleasure to present the 2005/6 Household Income and Expenditure Survey (HIES) National Report (Part One). The Provincial Report (Part Two) complements the National Report and is presented separately.

The design and formulation of any policy, strategy, plan and sound decision that affects families must depend on timely, relevant and vital socio-economic indicators at the household level. The Solomon Islands is pleased that the HIES will be able to provide relevant household level statistics for users in government, the private sector, the donor community, the civil society and the public at large.

The National Report provides information at the country level by urban and rural areas. The Provincial Report provides information at the country and provincial levels. The reports provide information on the income and expenditure behavior of Solomon Islands households.

The Reports also provide statistical tables in summary form which would provide useful information to any user. Any detailed tables can be obtained directly from the Statistics Office (SISO) of the Department of Finance and Treasury.

I gratefully acknowledge the invaluable support of the Secretariat of the Pacific Community (SPC) particularly the efforts of the Statistics Advisor, the Government Statistician and the Permanent Secretary for Finance & Treasury for their leadership in ensuring the accomplishing of this major project. I also wish to acknowledge the work of the HIES working committee members as well as the co-operation of the sample household respondents in making this survey possible.

I also take this opportunity to sincerely thank AUSAID and NZAID for their co-operation and financial support towards making this survey a reality.

Lastly but not the least, I deeply appreciate and heartily thank the staff of Statistics Office, Department of Finance & Treasury for their efforts in preparing this report.

I believe that the report will provide invaluable information for policy makers, planners, administrators and researchers in the public, private sectors and in the donor community in formulating policies & programmes, and making decisions for the improvement of the lives of Solomon Island families.

**Hon. Mr. Bart Ulufa'alu**  
**Minister of Finance and Treasury**

# Preface

---

The Household Income and Expenditure Survey (HIES) 2005/6 is the second and comprehensive nation-wide survey conducted by the Solomon Islands Statistics Office (SISO) of the Department of Finance and Treasury. The first survey was conducted in 1992 and was limited in scope and coverage. This survey was an initiative of the Secretariat of the Pacific Community (SPC)'s Solomon Islands Statistics Development Project (SISDP) and the Government of the Solomon Islands. It was aimed to strengthen and revitalize the national statistical system and to ensure the regular production and release of core socio-economic statistics on a timely and regular basis. The primary objectives of the HIES were to provide data required for rebasing the weights of the consumer price index (CPI) and updating the national accounts of the country. The secondary objectives include the provision of data for poverty assessment and the Millennium Development Goals (MDGs) and for all relevant cross sectional policy and planning purposes.

This National Report (Part One) presents summary statistics at the country level by urban and rural geographical areas. The Provincial Report (Part Two) is a separate report and complements the national report. Statistical information is presented at the provincial level. Government agencies, international agencies and development partners, private sector and individual users will find this report as an informative and useful guide.

The HIES 2005/6 has been successfully completed with the cooperation and support of a large number of people and agencies at various stages. Although it is not possible to individually acknowledge everyone involved in the survey, several persons and organizations deserve special mention. We wish to thank certain staff of the SISO particularly Mr. W.Piduru, Mr. D. Reggie, Mr. R. Aipaina and Mr. M. Dimola for survey operations efforts and Douglas Kimi who worked on data processing and data analysis. We also wish to acknowledge SPC's assistance in sampling, Mr. Chris Ryan and Greg Keeble in data processing and Mr. Willie Lahari for his overall HIES project management and leadership throughout the survey and in assisting with the analysis of the report.

This very important and timely initiative would not have been possible without the funding support of the AUSAID and NZAID to whom we express our sincere gratitude.

Luma Darcy  
Permanent Secretary  
Department of Finance & Treasury

Nick Gagahe  
Government Statistician (Ag)  
Solomon Islands Statistics Office

Willie Lahari  
Statistics Advisor & Project Manager  
SPC Solomon Islands Statistics Development Project (SISDP)

# Executive Summary

---

## Objectives

---

The 2005/6 Household Income and Expenditure Survey is the second nationwide survey of households undertaken by Solomon Islands Statistics Office (SISO) since 1992.

The primary objectives of the HIES includes:

- Re-basing of the weights of the current basket of goods and services in the Consumer Price Index (CPI) and obtaining relevant data to update the series of national accounts aggregates, particularly the Gross Domestic Product (GDP).

The secondary objectives of the HIES includes:

- Obtaining relevant data on housing facilities, demographic characteristics of households and income and expenditure for poverty analysis, Millennium Development Goals (MGDs) indicators and relevant data for policy and planning purposes.

## Scope and Coverage

---

The HIES operation covered both the Urban and Rural areas focusing on Honiara, Other Urban Areas and the Rural Areas of the ten (9) provinces, and aimed to produce estimates at the country national and provincial levels only.

The survey targeted private households whilst collective households in hospital, hotels, prison and educational institutions were excluded. A household is considered in the scope for the survey if the household have resided in the Solomon Islands for the last 12 months or more, or if not, they intend to live in Solomon Islands for the next 12 months.

A sample of 4,320 households was planned for the country and about 3,822 households (88.5%) responded favorably satisfying the survey requirements

The total estimated survey population for Solomon Islands is 534 thousand consisting of 16% of the population living in the urban areas and 84% in the rural areas.

**Table 0.1: Estimated Survey Population and Household Size by area**

Area	Household	Population	Percent	Household Size
Urban	12,488	85,498	16.0	6.9
Rural	74,246	448,174	84.0	6.0
Solomon Islands	86,734	533,672	100.0	6.2

## Survey Limitations

---

In theory, household income should equal household expenditure but in practise as in most income and expenditure surveys in the pacific region, the information collected from the HIES 2005/6 recorded that a majority of the households' income were relatively lower than their corresponding expenditures. A ratio of households' annual expenditure to its annual income by province (see Table 1.2) showed that expenditure in most cases was significantly higher than income.

The survey design and costing meant that the data collected would only provide estimates at the national and provincial geographical levels. The Solomon Island Statistics Office (SISO) will make all possible efforts to provide users with more disaggregated data at the provincial level.

This report only presents information at the national level and by urban and rural area. The accompanying provincial report presents information at the provincial level.

The field data collecting exercise was undertaken from October 2005 to March 2006 and that seasonality effects on expenditure was not fully considered.

## Key Findings on Household Expenditures

---

The average annual household expenditure for Solomon Islands as reported in Table 0.2 below was estimated at SBD 30 thousand compared to the median value of SBD 20 thousand, about 67% of the average value. The difference indicates that a number of households with relatively high annual expenditures have inflated the average (arithmetic mean) value.

The annual average expenditure for urban areas was SBD 70 thousand and for the rural areas the corresponding estimate was SBD 23 thousand. On an average, a household in the urban area spent about 3 times (299%) the amount spent by the rural households that reflect the general belief that the cost of living is higher in urban areas.

**Table 0.2: Average Annual Household and Per Capita Expenditure and Household Size by Area**

Area	Average Annual Household Expenditure	Median Annual Household Expenditure	Average Household Size	Average Annual Per Capita Expenditure	Median Annual Per Capita Expenditure
Urban	69,935	52,726	6.9	10,215	7,701
Rural	23,366	17,668	6.0	4,871	2,927
<b>Solomon Islands</b>	30,069	20,035	6.2	4,887	3,256

The annual average per-capita household expenditure for the country was estimated at SBD 5 thousand and the median value was SBD 3 thousand, which means that half the household population, on average, spends about SBD 3 thousand annually.

Table 0.3 below reports that the total annual expenditure over different decile groups for the urban areas and rural areas confirm vast differences when comparing from the lowest ten percent class to the highest ten percent class.

At the country level, Table 0.3 shows that the total annual expenditure of the top 10 percent class was more than double the amount of the other decile groups. In the urban areas, the top ten percent of population spent almost SBD 400 million whilst the lowest ten percent class spent about 6 million dollars.

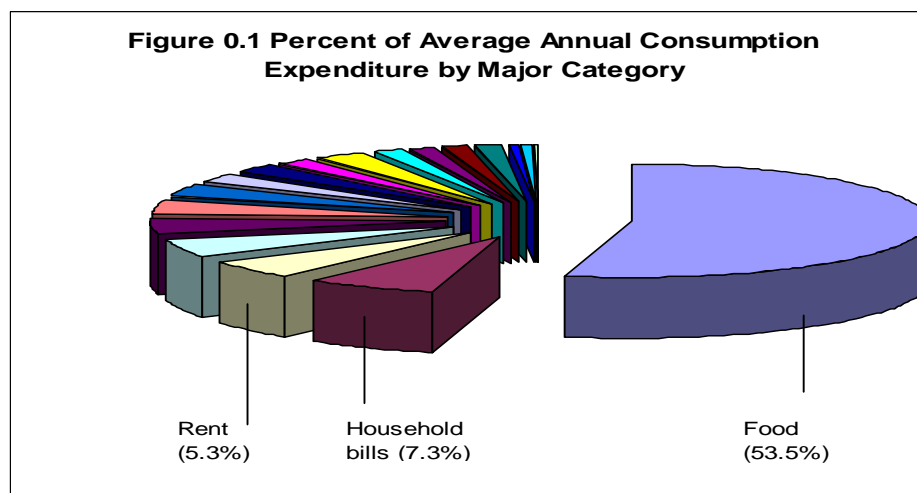

**Table 0.3: Total Annual Expenditure and Area by Population Decile**

Population Decile	Urban	Rural	<b>Solomon Islands</b>
	Amount	Amount	Amount
1	6,127,831	21,959,599	27,563,800
2	10,349,630	42,965,742	52,452,008
3	14,895,838	59,442,730	75,048,720
4	22,564,111	75,976,264	98,913,485
5	33,834,967	95,986,130	128,734,402
6	50,553,797	120,789,342	167,045,969
7	74,185,013	156,218,978	220,434,213
8	109,656,119	207,042,185	303,785,281
9	169,656,366	291,676,707	446,523,784
10	381,538,913	662,558,352	1,087,476,954
<i>Total</i>	873,362,585	1,734,616,030	2,607,978,615
<i>Average</i>	69,935	23,366	30,069
<i>Median</i>	52,726	17,668	20,035

Table 0.4 below shows that average annual expenditure on Food accounts for about 54% of average total expenditure for Solomon Islands. This is followed by average expenditures on household bills and rent at the national level. However, at the area level, average rent expenditure accounts for the second highest item of expenditure at 14 percent in the urban areas but is one of the lowest (1.1%) expenditure items in the rural areas.

**Table 0.4: Average Annual Household Expenditure by Major Category and Area**

Expenditure Category	Urban		Rural		Total	
	Amount	%	Amount	%	Amount	%
<i>Food</i>	24,687	35.30	14,645	62.69	16,091	53.51
Food purchases	21,812	31.19	5,886	25.20	8,179	27.20
Food home consumed	2,380	3.40	8,334	35.67	7,477	24.87

<i>Credit- Schemes- Welfare Benefits</i>	1,205	1.72	59	0.25	224	0.75
<i>Miscellaneous Goods &amp; Services</i>	12,146	17.37	3,389	14.50	4,650	15.46
Cash Given	4,143	5.92	1,051	4.50	1,496	4.97
Education	3,007	4.30	843	3.61	1,155	3.84
Medical Health	323	0.46	56	0.24	94	0.31
Goods Received	937	1.34	540	2.31	597	1.99
Miscellaneous Payment	1,462	2.09	236	1.01	413	1.37
Miscellaneous Services	1,226	1.75	404	1.73	523	1.74
Miscellaneous Goods	1,048	1.50	258	1.11	372	1.24
Average total	69,935	100.00	23,363	100.00	30,069	100.00

Food consumption patterns vary markedly between the rural and urban areas as shown by expenses on regular food purchases in Table 0.5 below. At the country level, households spent about 41% on cereals and cereal products alone. An example of a major cereal product is rice. The consumption pattern shows that the rural areas spent almost twice the amount spent by urban areas on cereals and cereal products.

**Table 0.5: Structure of Annual Average Food Consumption Expenditure by Area (percent)**

Food Items	Urban	Rural	Solomon Islands
111 Fruit	5.41	1.82	3.20
112 Vegetables	10.90	5.75	7.73
121 Meat & meat products	4.60	2.42	3.26
122 Poultry	3.96	0.72	1.96
123 Fish (incl. Shellfish)	16.90	12.98	14.49
131 Bread & biscuits	11.78	9.55	10.40

161 Non-alcoholic beverages	1.86	0.60	1.08
162 Confectionery	3.57	6.17	5.17
171 Other foods	7.23	6.32	6.67
181 Take-aways & food eaten outside the home	3.21	1.63	2.24
Total	100.00	100.00	100.00

## Income Inequality

Whilst inequality measures can be better represented with poverty related measures, it was felt that a broad measure of income distribution needed to be reflected in this report.

To show the concentration of income (expenditure), a broad measure of inequality is applied through a Gini coefficient. Gini coefficient is a standard measure of inequality and is closely associated with the Lorenz curve. The Gini coefficient will equal to zero if income (expenditure) is distributed equally and if only one person owns all income, then Gini coefficient will equal to one where all other individuals have no income. The Gini coefficient of inequality varies between 0 and 1.

Table 0.6 shows that inequality as measured by the Gini coefficient is 0.361 for the Solomon Islands and by urban and rural areas it is 0.286 and 0.316 respectively, indicating relatively wider inequality in the rural areas.

<b>Table 0.6: Gini Coefficient for Total Annual Expenditure - Solomon Islands, Urban and Rural</b>		
Solomon Islands	Urban	Rural
0.361	0.286	0.316

# Part I – Survey Design and Operations

---

---

# 1.1 – Survey Design and Operations 2005/6

---

## 1.1.1 - Introduction and Objectives

---

The 2005/6 Household Income and Expenditure Survey is the second nationwide survey of households undertaken by Solomon Islands Statistics Office (SISO) since 1992.

The primary objectives of the HIES includes:

- Re-basing of the weights of the current basket of goods and services in the Consumer Price Index (CPI). The survey also aimed to provide data on the behavior of household consumption expenditure patterns that will help form the weights that would reflect the relative importance that consumers attach to commodities and services;
- Obtaining relevant data for purposes of updating the series of national accounts aggregates particularly the Gross Domestic Product.

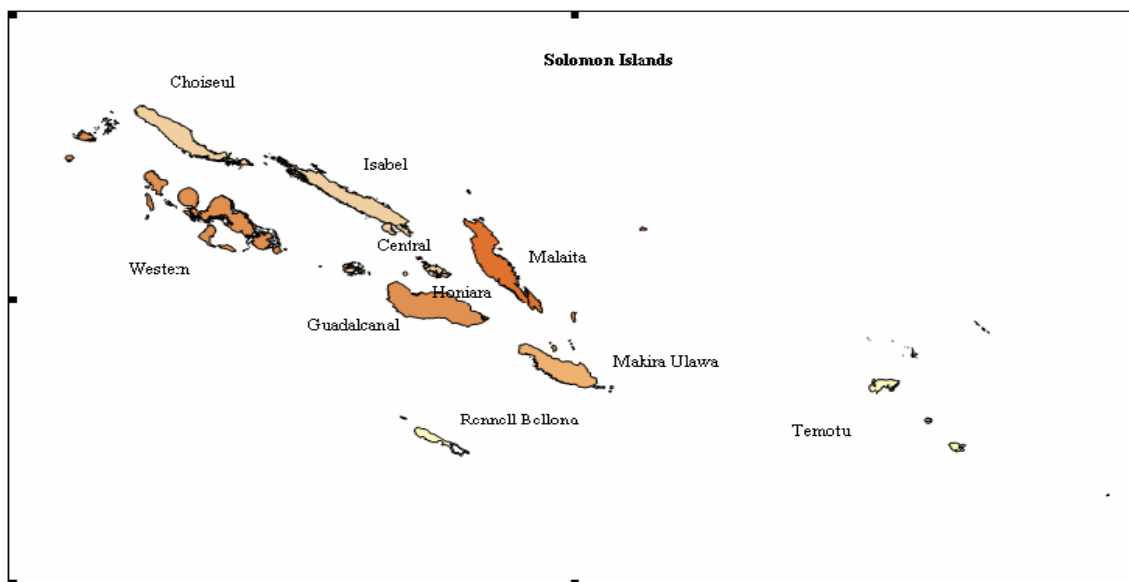

The secondary objectives of the HIES were to:

- Obtain data on housing and general demographic characteristics of households;
- Obtain data on poverty measures, income and income inequality measures;
- Obtain relevant data for the Millennium Development Goals (MDG), particularly health and education; and
- Obtain other relevant data where necessary

## 1.1.2 - Scope and Coverage

---

The HIES operation covers both the Urban and Rural areas focusing on Honiara, Other Urban Areas and the Rural Areas of the nine (9) provinces, and aims to produce estimates at the national and provincial levels only. Due to cost reasons, the survey design was limited in its scope to derive adequate estimates at the lower geographical levels like the Enumeration Areas (EAs) and below.

The survey targeted private<sup>1</sup> households. Collective<sup>2</sup> households in hospital, hotels, prison and educational institutions were excluded. A household was considered in the scope of the survey if the household had resided in the Solomon Islands for the last 12 months or more, or if the household intended to live in Solomon Islands for the next 12 months. Households who didn't meet either of these criteria were excluded from the survey. Although the sample was representative of the population, a small number of areas were excluded in the provinces of Malaita and Temotu because of remoteness.

### 1.1.3 - Sampling Strategy

---

#### ***Sampling Frame***

The 1999 Population Census provided a list of the number of households down to the lowest enumerated area (EA) by province. The list was revised by the Survey Section of the SISO due to significant changes in population size and the movement of households that became inevitable during 2000-2003 during and after the civil unrest which began in 1998. Maps of towns and geographical areas were available with the SISO and were electronically imputed in the Geographical Information System (GIS)

---

<sup>1</sup> Private households is a group of people (related or unrelated) who live together (not necessarily living in one housing unit) and share a common cooking arrangement. A person who is living alone is also considered as a private household.

<sup>2</sup> Collective households are group of unrelated people who live together such as in hotels, prisons, hospitals etc.

managed by the SISO. The maps together with the revised Census list of EAs and number of households provided the frame for designing the HIES 2005/6.

### ***Survey Design***

The survey was based on a two-stage sampling strategy using probability proportional to size (PPS) selection and random selection. The strategy for selection of each area type is slightly different depending also on enumerator workload schedule and the need to accommodate estimates at the National and Provincial level as well as Urban and Rural splits.

The Survey was designed to collect data for national and provincial level estimates and covered both urban and rural areas. The survey covered Honiara, provincial centers and rural areas within these provinces.

The sampling scheme used was a stratified two stage design with the Enumeration Areas (EA) as the Primary Sampling Unit (PSU) and the households within the sample areas as the secondary sampling unit (SSU). In the first stage the EAs were selected with probability proportional to their population size based on the 1999 population census. In the second stage households were selected using systematic sampling with a random start. The next stage was allocating the sample to each provinces proportional to the square-root of the population. This should mean that estimates of each province would roughly have the same level of accuracy. The sample was then split for each province between the provincial centers (considered to be urban) and the remaining rural population. Given the need for urban and rural estimates the sample was split between the two areas proportional to the square-root of the population based on the 1999 census. The last stage in the process involved modifying the final counts to accommodate the workloads for interviewers during the fieldwork. The interviewers were expected in the field for six months and could accommodate 10 households per month (60 household in total). It was desirable to have the total workloads for each province divisible by 60 to give each interviewer an even sized workload and have the sample spread out evenly across each month.

Since Honiara (capital of Solomon Islands) consists of a mix of areas which covers high income, middle income and low income areas, it was advisable that the EAs be grouped based on the class best suited to their situation. Thus for Honiara the EA list was sorted by the income group category for selection. The number of EAs to select from Honiara is simply the desirable sample size (480 households) divided by the number of households to be selected for each EA. It was decided that 10 households should be selected from each selected EA. Therefore the number of EAs that were selected was equivalent to  $(480 / 10) = 48$  EAs.

### ***Selection of EAs***

To select the EAs using proportional probability sampling (PPS) the following steps needed to be applied; (taking Honiara as an example):

*Step 1:* Determine the total number of households in Honiara according to the frame (6,742 households).

*Step 2:* Divide the number by the number of EA selections required to determine the skip for the area;  $6,742 / 48 = 140.46$ .

*Step 3:* Select a random between 0 and the skip determined in *Step 2* (let this be 126.00).

*Step 4:* Determine the selection number for Honiara by continuously adding the skip to the random start until the maximum number of households in Honiara has been reached (eg, 126.00, 266.46, 406.92, 547.38, ....., 6,727.55).

*Step 5:* Round the numbers to the nearest whole number (eg 126, 266, 407, 547, ....., 6,728).

*Step 6:* Determine which EA in the list are associated with these selection numbers by looking at the cumulative count of the households.

### ***Selection of Households***

A sample size of 5 per cent was desired with a total of 3,792 households. The households were selected based on the estimated population at the time of the mid-point of the survey field work –December 31, 2005. The estimate for the number of households for each province was derived by dividing the projected person count by average household size (derived from the 1999 census results) which summed up to 75,839 households. A further 10 per cent sample loss was employed resulting in the sample size adjusted to 4,213 households in total. This was to compensate for selected households being vacant, refusals by respondents to participate, death in the family and poorly filled out questionnaires that could not be used. Finally, adjustments to the allocation of equal workloads (60 households per enumerator) resulted in the sample size of 4,320 households selected for the survey.

## 1.1.4 - Survey Instruments and Operations

---

### ***Survey Instruments***

The HIES is a relatively complex survey and the instruments to collect data was implemented through the following questionnaires and associated sections:

- Household Control Form – household composition and particulars;
- Household Expenditure Form – housing amenities, facilities and major household, expenditure on tenure, fixed capital, land, property etc;
- Personal Income Form – Income pattern of household members and other income earning activities;
- Household Dairy – Daily expenditure by type of goods and services
- An additional health module was included – health facility utilization, immunization, motherhood, mortality, breast feeding & family planning, Malaria and miscellaneous

### ***Data Collection and Operation***

The method of collection was via face to face interview. This is where the interviewer personally visits the household and asks the household (usually the household head) to respond to the questions on the four main questionnaires including the health module.

A total of 85 trained interviewers and 15 supervisors were assigned full time to complete the field operation. Each supervisor was assigned to over-see four enumerators although in some provinces, depending on the locality and distance to cover, there were more enumerators. Each interviewer had to interview at least 60 households during the 6 month period. This comprise of 6 workloads of 10 households each. Each workload took four (4) weeks in total and is outlined below:

*Week 1:* Prior to household listing the interviewers travel around the EA and list all the households located in the area. A sample of 20 households is selected from each EA using a systematic skip, 10 if the EA is urban. The interviewer visited all the selected households and introduced the survey, fill the Control Form and drop off the first diary.

*Week 2 and 3:* Interviewer visits all the selected households each day to assist with filling out the diary. Conduct the expenditure, income and health questionnaires for each selected households during the 2 weeks.

*Week 4:* Interviewers confirm that all survey questionnaires are complete and the collection of all diaries from all selected households. The completed forms are passed on to the supervisor who spot checks for completeness and deal with any problems that might have arise in the field and is responsible to dispatch the completed forms.

### **Data Processing**

The Statistics Programme at the Secretariat of the Pacific Community (SPC) provided the assistance in data processing. A HIES data entry program was setup in CPro version 2.6 and data entry started soon after the first workload was registered in the Statistics Office in November 2005 until May 2006. Logic procedures for data editing are prepared in Microsoft Access and data editing for all questionnaires were done in CPro, except for the Diary where the editing is done in Microsoft Excel. Data management queries are done in Microsoft Access and the production of tables was done in Microsoft Excel. This report was prepared in Microsoft Word. Data verification of 5 per cent is done to check the accuracy of data input, though data edit checks are carried out for completeness, consistency and accuracy including the outliers. Anomalies of data were amended appropriately.

### **Survey Mandate**

The HIES is executed within the Statistics Act. Whilst the ownership of the data belongs to the people of the Solomon Islands, data security, confidentiality and institutional ownership of the data will be held with the Statistics Office.

## **1.1.5 - Weighting**

---

A weight indicates how many people in the population a person represents. The weight assigned to each EA and or household was based on the sampling technique used as mentioned in the survey design. For the HIES, each household carried two weights:

- A Strata weight – representing the weight of the household within the geography or locality strata, that is within Honiara, the provincial centers and the rural areas;
- A National weight – representing the weight of the household within the whole of the Solomon Islands.

The EAs as the primary sample unit were initially stratified according to respective localities in rural and urban areas and a total 18 strata was derived. The strata are as follows;

Strata 1: Choiseul- Urban	Strata 2: Choiseul–Rural
Strata 3: Western- Urban	Strata 4: Western-Rural
Strata 5: Isabel- Urban	Strata 6: Isabel-Rural
Strata 7: Central-Urban	Strata 8: Central-Rural
Strata 10: Guadalcanal–Urban	Strata 9: Rennel-Rural

Strata 12: Malaita-Urban  
Strata 14: Makira- Urban  
Strata 16: Temotu-Urban  
Strata 18: Honiara-Urban

Strata 11: Guadalcanal– Rural  
Strata 13: Malaita-Rural  
Strata 15: Makira-Rural  
Strata 17: Temotu-Rural

The sample selection scheme used the standard method of selecting the primary sampling units (EAs) probability proportional to size (the size being the latest household count for each EA), and then selecting a fixed number of households within each selected EA. So the sample weight for a household would be:

$$\text{Weight} = 1 / P(\text{selection})$$

where,

P = probability

$P(\text{selection}) = P(\text{selected stage 1}) * P(\text{selected stage 2})$

$P(\text{selected stage 1}) = (\# \text{ hholds in EA on frame}) / (\text{skip for that province})$

$P(\text{selected stage 2}) = (\# \text{ hholds responded in EA}) / (\text{actual } \# \text{ hholds in EA})$

### ***Error Measurements***

No formal measures of sample errors have been calculated for the survey results.

Non sampling errors cannot be readily measured. These included:

- A response difficulty caused by misunderstanding of what was required from the survey and survey instruments by both households and interviewers.
- The questionnaires were in English, which is at least a second language for interviewers and respondents.
- The fact that some expenditure are seasonal and would not have been picked up in the survey period.
- The exclusion of remote areas and institutions from the sampling frame.

## **1.1.6 - Reference Period**

---

The survey data collection phase was undertaken for a period of 6 months from October 2005 to March 2006.

The reference period of two weeks was sufficient also for recording data particularly expenditure data from the diary although diaries are usually scheduled for one month. This was not necessarily a calendar month but a period of four weeks preferably to cover seasonality on household expenditures. Most households particularly in provincial and rural areas usually earn a two weekly income whilst a few earn on a monthly basis and thus it was seen as the appropriate timeframe to capture data

particularly household expenses from the diary where data was collected for a period of two weeks.

## 1.1.7 - Response Rates

---

A sample of 4,320 households was planned for the country and about 3,822 households (88.5%) responded favorably satisfying the survey requirements. See table 1.1 below.

**Table 1.1 Response Rate by Province**

Province	Sample Planned	Sample Responded	Response Rate
Choiseul	300	279	<b>93.0</b>
Western	540	436	<b>80.7</b>
Isabel	360	259	<b>71.9</b>
Central	360	332	<b>92.2</b>
Renbell	120	113	<b>94.2</b>
Guadalcanal	600	570	<b>95.0</b>
Malaita	780	687	<b>88.1</b>
Makira-Ulawa	420	401	<b>95.5</b>
Temotu	360	312	<b>86.7</b>
Honiara	480	433	<b>90.2</b>
<b>Solomon Islands</b>	<b>4,320</b>	<b>3,822</b>	<b>88.5</b>

### ***Non-Response***

Despite efforts made by the enumerators and follow up attempts by the supervisors in most of the cases, there was non-response encountered during the survey.

The reasons for non response by the household were due mainly to the following:

- The household was out of scope of the survey
- Dwelling was vacant or not being lived in
- The household could not be contacted after a number of attempts
- Household excluded for other reasons like death in the family, refusals, customary reasons etc

## 1.2 - Measuring income or expenditure

---

### 1.2.1 - Aggregated Income and Expenditure

---

Income and expenditure are presented in nominal terms or at current prices and are aggregated at **annual** values.

#### **Total Expenditure**

Total expenditure is categorized into eight major categories which comprise of Food (item 1) and Non- Food (item 2-8):

1 Food	5 Transport
2 Housing	6 Tobacco and alcohol
3 Household operation	7 Payments of credit schemes and loans
4 Clothing and footwear	8 Misc. goods and services

#### **Food Expenditure**

Food expenditure consists of food purchases, food given as gifts and the value of home grown food consumption. Food comprises of the following sub category items:

111 Fruit	141 Dairy & milk products
112 Vegetables	151 Farm products, fats & oils
121 Meat & meat products	161 Non-alcoholic beverages
122 Poultry	162 Confectionery
123 Fish (incl. Shellfish)	171 Other foods
131 Bread & biscuits	181 Take-aways & food eaten outside the home
132 Cereal & cereal products	

#### **Non-Food Expenditure**

2 Housing	6 Tobacco and alcohol
3 Household operation	7 Payments of credit schemes and loans
4 Clothing and footwear	8 Misc. goods and services
5 Transport	

#### **Aggregated Income**

The household total income is obtained by summing up the following sources of income:

- (1) Annual wage/salary income
- (2) Annual income from self employment & related business activities
- (3) Annual income from previous job
- (4) Annual income from services
- (5) Annual income from benefits
- (6) Annual income from home production
- (7) Annual income from cash gifts
- (8) Annual income from goods received
- (9) Annual income from gambling
- (10) Annual income from rent
- (11) Annual loan income
- (12) Annual income from other sources

### 1.2.2- Comparison of Income and Expenditure

---

When comparing household income and expenditure it is generally noted in HIES surveys that the expenditure data is more accurate than the income data. This is evidenced in the Solomon Islands 2005/6 HIES. Income is a subject that is often sensitive to many people and a number of respondents are reluctant to disclose the full amount of their income, particularly if they have sensitive sources of income for taxation purposes etc. Even some items like the total amount of cash gifts received from relatives outside the household may often be simply overlooked and may be underreported.

The comparison of annual income and expenditure is presented by the ratio of expenditure to income as shown in Table 1.2 below. The table shows that 55% (ratio of 1.26-2.00), over half the total sampled households reported having expenditures higher than their income. Out of the 55%, 20% (ratio 2.0+) of total households reported having expenditures twice or more than twice the value of their incomes reported. It is therefore evidenced that these households were spending relatively more than their income.

## Total Expenditure/Income

**Table 1.2 Ratio of Total Annual Expenditure over Total Annual Income by Province**

Ratio Exp/Income	Province																					
	Choiseul		Western		Isabel		Central		Rennell - Bellona		Guadalcanal		Malaita		Makira-Ulawa		Temotu		Honiara town		Solomon Islands

# Part II – Demographics & Dwelling Characteristics

---

---

## 2.1 - Demographic Profile

### 2.1.1 - Population Estimate

The result of the survey recorded a total population of 533,672 persons and 86,734 households in 2005/6. The total population comprised of 274,098 males and 259,573 females. The overall sex ratio of the population worked out to be 106 males per 100 females. This was a slight improvement from the sex ratio of 107 reported in the 1999 population census. The annual growth rate of the population between 1999 and 2005 was 4.4 per cent doubling that of 2.8 percent in 1999. At this annual growth rate (4.4%) the population is expected to double in 16 years. The very high growth rate reported can be attributed to the results of the 1999 population census which was grossly undercounted, as a consequence of the ethnic tension which began in 1999 that coincided with the census field enumeration.

**Table 2.1 Population Estimate by Sex, households and Province :1999-2005/6**

Province	2005/6					1999				
	Male	Female	Total	Private Household	Annual growth % (1999-2005)	Male	Female	Total	Private Household	Annual growth % (1986-1999)
Choiseul	16,193	15,066	31,259	5,056	7.4	10,236	9,772	20,008	3,045	3.0
Western	40,640	41,212	81,852	13,650	4.4	33,190	29,549	62,739	9,570	3.2
Isabel	11,256	12,382	23,638	4,614	2.4	10,424	9,997	20,421	3,472	2.6
Central	12,822	11,670	24,491	4,209	2.1	11,193	10,384	21,577	3,533	2.0
Rennel	2,196	2,213	4,409	672	10.3	1,230	1,147	2,377	423	2.2
Guadalcanal	44,678	39,759	84,438	14,611	5.6	31,423	28,852	60,275	10,164	1.5
Malaita	72,470	68,098	140,569	22,115	2.3	61,209	61,411	122,620	18,362	3.3
Makira	26,442	23,584	50,026	7,524	8.0	15,943	15,063	31,006	4,859	2.7
Temotu	11,736	12,064	23,800	4,300	3.8	9,146	9,766	18,912	3,335	1.9
Honiara	35,665	33,525	69,189	9,984	5.7	27,387	21,720	49,107	6,641	3.8
<b>Grand Total</b>	<b>274,098</b>	<b>259,573</b>	<b>533,672</b>	<b>86,734</b>	<b>4.4</b>	<b>211,381</b>	<b>197,661</b>	<b>409,042</b>	<b>63,404</b>	<b>2.8</b>

The total population is made up of 16 percent of the population living in the urban areas and 84 percent located in the rural area. The overall household size is 6 persons per household.

**Table 2.2: Estimated Survey Population and Household Size by area**

Area	Household	Population	Percent	Household Size
Urban	12,488	85,498	16.0	6.9
Rural	74,246	448,174	84.0	6.0
<b>Solomon Islands</b>	<b>86,734</b>	<b>533,672</b>	<b>100.0</b>	<b>6.2</b>

Table 2.3 presents the percentage of population by age and sex separately for each urban and rural area and for the whole of Solomon Islands. The age specific population showed that overall, 39.6 percent were below 15 years of age, 57.8 percent were between 15 to 64 years of age group and only 2.2 percent over 65 years of age. This means that the Solomon Islands still has a very young population.

**Table 2.3: Percentage distribution of estimated population in Age Group by Area and Sex**

Age group	Urban			Rural			Solomon Islands		
	male	female	Total	male	female	Total	male	female	Total
<15	34.0	35.6	34.8	40.7	40.4	40.6	39.6	39.6	39.6
15-19	12.3	12.6	12.4	10.2	10.0	10.1	10.6	10.4	10.5
20-24	12.1	12.4	12.2	7.9	9.4	8.6	8.6	9.9	9.2
25-29	11.8	12.2	12.0	8.2	9.4	8.8	8.8	9.9	9.3
30-34	7.8	9.9	8.8	7.7	8.0	7.9	7.7	8.3	8.0
35-39	7.3	5.8	6.6	6.3	6.2	6.3	6.5	6.1	6.3
40-44	4.0	4.0	4.0	4.9	4.3	4.6	4.8	4.3	4.5
45-49	4.2	2.8	3.5	3.7	3.4	3.6	3.8	3.3	3.6
50-54	2.5	2.0	2.3	2.8	2.7	2.8	2.8	2.6	2.7
55-59	2.0	1.2	1.6	2.1	2.2	2.2	2.1	2.1	2.1
60-64	0.9	1.0	0.9	1.8	1.5	1.7	1.7	1.4	1.6
65+	1.0	0.6	0.8	3.0	2.0	2.5	2.7	1.7	2.2
Ns	0.1	0.0	0.1	0.5	0.3	0.4	0.5	0.3	0.4
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

In order to indicate the young (less than 15 years) and the old (65 years and above) that are being supported by the working age group (15-64 years), the age dependency ratio is calculated as follows:

$$\text{Age Dependency Ratio} = \frac{\text{Population (0-14 years + 65 years and over)}}{\text{Population (15-64 years)}} \times 100$$

The age dependency ratio for urban areas was 55, the rural area was 76, and for the country was 72. This means that in Solomon Islands some 72 persons were dependent on every 100 persons in the working age group for economic support.

## 2.1.2 - Household Characteristics

---

### *Marital Status*

**Table 2.4: Percentage distribution of population by Marital Status, Area and Sex**

Area and sex	Marital Status						Solomon Islands
	Never married	Married	Divorced	Separated	Widowed	Not Stated	
Solomon Islands	<b>58.9</b>	<b>37.0</b>	<b>0.3</b>	<b>0.9</b>	<b>1.2</b>	<b>1.7</b>	<b>100.0</b>
Males	60.8	35.7	0.2	0.9	0.7	1.7	100.0
Females	56.8	38.4	0.3	0.9	1.9	1.6	100.0
Urban	<b>61.5</b>	<b>35.8</b>	<b>0.3</b>	<b>0.7</b>	<b>0.9</b>	<b>0.8</b>	<b>100.0</b>
Males	62.7	35.1	0.4	0.6	0.3	0.9	100.0
Females	60.2	36.6	0.3	0.7	1.5	0.8	100.0
Rural	<b>58.4</b>	<b>37.3</b>	<b>0.2</b>	<b>1.0</b>	<b>1.3</b>	<b>1.8</b>	<b>100.0</b>
Males	60.5	35.8	0.2	1.0	0.7	1.8	100.0
Females	56.2	38.8	0.3	1.0	1.9	1.8	100.0

Table 2.4 shows that slightly over half the population both males and females are never married. This is about the same in both urban and rural areas.

The corresponding age groups in Table 2.5 show no significant report of married persons below the age of 15 years. At the national level about 84 percent of the population reported never married in the age groups 15-19 years. About 59 percent of the total population had never married and this can be attributed to the fact that about 40 percent of the total population are below the age of 15 years.

**Table 2.5: Percentage distribution of population in Age Group by Sex and Marital Status**

Sex by Marital Status	Age Group						
	<15	15-19	20-39	40-59	60+	ns	Total

<b>Females</b>	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Never married	100.0	81.8	23.0	4.6	9.1	50.6	56.8
Married	0.0	8.0	71.9	83.9	56.2	46.0	38.4
Divorced	0.0	0.0	0.6	0.8	1.3	0.0	0.3
Separated	0.0	1.9	1.8	0.6	1.1	0.0	0.9
Widowed	0.0	0.1	0.7	9.7	29.6	0.0	1.9
Not Stated	0.0	8.2	2.0	0.5	2.8	3.4	1.6
<b>Total</b>	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Never married	100.0	84.0	29.3	3.2	12.1	60.8	58.9
Married	0.0	4.8	66.2	89.2	66.7	30.4	37.0
Divorced	0.0	0.0	0.5	0.7	0.5	0.0	0.3
Separated	0.0	2.6	1.6	0.6	1.3	0.0	0.9
Widowed	0.0	0.1	0.4	5.9	17.3	0.0	1.2
Not Stated	0.0	8.5	2.0	0.4	2.3	8.7	1.7

\* Persons below 15 yrs who reported as not stated were assumed to be 'never married'.

Table 2.6 below shows the percentage of 15 years & over age group by sex and educational attainment. This age group is the potentially economically active population and the table further shows that close to half (47%) of these age group have attained primary level education and only less than 6% of the combined total population of persons attaining a trade & other certificate, diploma, degree & post graduate level. It is obvious that the males have outperformed the females in all the respective levels from form 1 to post graduate level. The only attainment that females have recorded higher than the males' is in the primary level.

**Table 2.6: Distribution of Age Group population (15yrs +) by Sex and Education Attainment**

## 2.2 – Dwelling Characteristics

The types of dwelling characteristics are important to assess the accessibility and affordability of household facilities. Facilities may include sources of energy used for cooking and lighting, water sources etc that form major features of a dwelling.

Table 2.7 shows that close to 45% of households in the Solomon Islands have traditional type houses which consists of 13% in urban and slightly over half (50.3%) of total households in rural areas. In urban areas 68% of households live in single housing units.

**Table 2.7: Distribution of households in Area by Type of House**

Type of housing	Urban		Rural		Solomon Islands	
	Households	%	households	%	households	%
Permanent - Single housing unit - More than one housing unit	8,516	68.2	21,854	29.4	30,370	35.0
	1,477	11.8	6,819	9.2	8,296	9.6

Total	12,488	100.0	74,246	100.0	86,734	100.0

Table 2.8 overleaf shows that at the national level, slightly over half (55%) the households reported dwellings of traditional/thatched materials used for the outer walls. This varies significantly at the urban and rural areas where 18% was reported for urban area and 62% for the rural areas.

**Table 2.8: Distribution of households in Area by Materials Used for the Outer Walls**

Material for Outer Walls	Urban		Rural		Solomon Islands	
	households	Percent	Households	%	households	%
Timber	5,998	48.0	18,242	24.6	24,240	27.9

Total	12,488	100.0	74,246	100.0	86,734	100.0

The primary source of water for Drinking and Cooking as in Table 2.11 is by piped supply outside the neighborhood and piped into the household/yard as reported by 22% of households in the Solomon Islands. The primary source of water in the urban areas is from water piped into the households/yard as reported by 64% of households whereas in the rural areas the primary source is piped water supply outside the neighborhood as reported by 25% of households.

**Table 2.11: Distribution of households in Area by Primary Source of Water for Drinking and Cooking**

Primary water source	Urban		Rural		Solomon Islands	
	households	%	Households	%	households	%
Piped into household/yard	7,950	63.7	10,981	14.8	18,931	21.8

Table 2.12 shows that the main type of toilet facility used by households in Solomon Islands is from closet over the sea or water as reported by 41% of households in Solomon Islands and consists mainly of the households in the rural areas. Slightly over half the households in the urban areas reported own flush septic tank as their primary source.

**Table 2.12: Distribution of households in Area by Main Type of Toilet Facility**

Primary source	Urban		Rural		Solomon Islands	
	households	%	Households	%	households	%
Own flush septic tank	7,066	56.6	4,676	6.3	11,742	13.5

# Part III – Expenditure and Income

---

---

## 2.3 – Annual Expenditure

---

### 2.3.1 Annual Household Expenditure

The average annual household expenditure for Solomon Islands was estimated at SBD 30 thousand compared to the median value of SBD 20 thousand as shown in Table 3.1. This is about 67% of the annual average. The difference indicates that a number of households with relatively high annual expenditure have inflated the average (arithmetic mean) value.

**Table 3.1: Average Annual Household and Per Capita Expenditure and Household Size by Area**

Area	Average Annual Household Expenditure	Median Annual Household Expenditure	Average Household Size	Average Annual Per Capita Expenditure	Median Annual Per Capita Expenditure
Urban	69,935	52,726	6.9	10,215	7,701
Rural	23,366	17,668	6.0	4,871	2,927
<b>Solomon Islands</b>	30,069	20,035	6.2	4,887	3,256

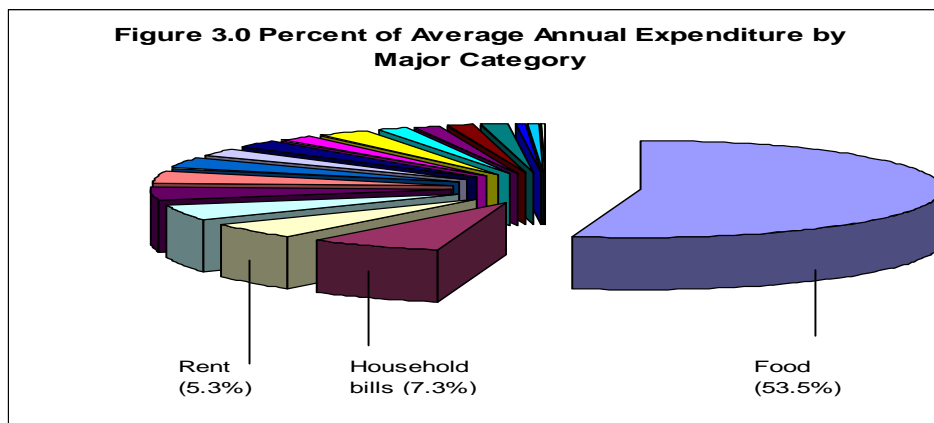

The average annual expenditure for urban areas was SBD 70 thousand and for the rural areas the corresponding estimate was about SBD 23 thousand. On an average, a household in the urban spent about 3 times the amount spent by the rural households that reflect the general belief that the cost of living is higher in urban areas.

The annual average per-capita household expenditure for the country was estimated at about SBD 5 thousand and the median value was SBD 3 thousand, which means that half the population on average spends SBD 3 thousand annually.

Table 3.2 below shows that average annual expenditure on Food accounts for about 54% of average total expenditure for Solomon Islands. This is followed by average expenditures on household bills and rent at the national level. However, at the area level, average rent expenditure accounts for the second highest item of expenditure at 14 percent in the urban areas but is one of the lowest (1.1%) expenditure items in the rural areas.

**Table 3.2: Average Annual Household Expenditure in Area by Major Category**

Expenditure Category	Urban		Rural		Total	
	Amount	%	Amount	%	Amount	%
<i>Food</i>	24,687	35.30	14,645	62.69	16,091	53.51

### 2.3.2 Food Consumption

Food consumption patterns can vary markedly between the rural and urban areas as shown in Table 3.3 below. The table represents food purchases by households and does not include food received as gifts and home grown food consumption as aggregated in Table 3.2 earlier. Table 3.3 shows that the country spends about 49% on cereals and cereal products alone. A major example of a major cereal product is rice and flour. The consumption pattern shows that the rural areas spent almost twice the amount spent by urban areas on cereals and cereal products.

**Table 3.3: Structure of Annual Average Food Consumption Expenditure by Area (percent)**

Food Items	Urban	Rural	Solomon Islands
111 Fruit	5.41	1.82	3.20
112 Vegetables	10.90	5.75	7.73
121 Meat & meat products	4.60	2.42	3.26

171 Other foods	7.23	6.32	6.67
181 Take-aways & food eaten outside the home	3.21	1.63	2.24
Total	100.00	100.00	100.00

### 2.3.3 Total Annual Expenditure and Type of House

Table 3.4, 3.4a and 3.4b shown overleaf show the total annual expenditures by type of housing. The tables report that households occupying traditional type houses and households occupying permanent – single housing unit spent relative more on food than households occupying other types of houses. This varies in both urban and rural areas where households occupying permanent single housing units spent more on Food in contrast to households who spent more on Food and occupy traditional type housing in rural areas. There is also variation in expenditure in other non food items in urban and rural areas.

**Table 3.4 Total Annual Expenditure and Type of Housing by Expenditure Group – Solomon Islands : '000 SBD**

Expenditures	Permanent -single housing unit	Permanent -more than one housing Unit	Building with two or more apartments	Dwelling attached to a shop or other non- residential building	Lodging house	Traditional	Other	Solomon Islands

### 2.3.5 Total Annual Expenditure by population decile

Presentation of household expenditure estimates for analysis can be summarized to form classes of population formed on the basis of monthly per capita expenditure or for our purposes using total annual expenditure. In this case, 10 annual expenditure classes were derived for urban and rural areas separately. This is presented in Table 3.6 below.

**Table 3.6: Total Annual Expenditure and Area by Population Decile**

Population Decile	Urban	Rural	<b>Solomon Islands</b>
	Amount	Amount	Amount
1	6,127,831	21,959,599	27,563,800
2	10,349,630	42,965,742	52,452,008
3	14,895,838	59,442,730	75,048,720
4	22,564,111	75,976,264	98,913,485
5	33,834,967	95,986,130	128,734,402
6	50,553,797	120,789,342	167,045,969
7	74,185,013	156,218,978	220,434,213
8	109,656,119	207,042,185	303,785,281
9	169,656,366	291,676,707	446,523,784
10	381,538,913	662,558,352	1,087,476,954
<i>Total</i>	873,362,585	1,734,616,030	2,607,978,615
<i>Average</i>	69,935	23,366	30,069
<i>Median</i>	52,726	17,668	20,035

Table 3.6 reports that the total annual expenditure over different decile groups for the urban areas and rural areas confirm vast differences when comparing from the lowest ten percent class to the highest ten percent class.

At the country level, Table 3.6 shows that the total expenditure of the top 10 percent class is more than double the amount of the other decile groups. In the urban areas, the top ten percent of population spent almost 400 million whilst the lowest ten percent class spent about 6 million dollars.

## 2.4 - Measurement of Income

### 2.4.1 - Household Income and Household Activities

In section 1.2.2 a comparison of expenditure and income showed that expenditure data in the HIES appeared more accurate than the income data.

The comparison of annual income and expenditure presented by the ratio of expenditure to income (see Table 1.2) showed that over half (55%) of total sampled households reported their ratios between 1.26 - 2.00 or more which meant that over half the households had expenditures of about 26% more, to double, or more than double, their corresponding incomes.

**All income related tables must be used with caution.**

#### *Income by Source*

The major source of income in the Solomon Islands as stated in Table 4.0 below is from the income value of home production (37%) followed by gross Salaries & Wages (26%). Home production here refers to the value of goods and services produced by the household to be predominantly consumed by the same household or given as gifts. Such goods like vegetables, fruits, fish etc. The kinds of activities that generate such value of production are typical of the rural lifestyles of the Solomon Islands where over half (56%) of households reported home production as their main income source. In the urban areas close to half (48%) the households reported gross Salaries & Wages as their major income source.

**Table 4.0 Total Annual Income by Major Source by Area**

Source Of Income	Urban	%	Rural	%	Solomon Islands	%
Gross Salaries/Wages	369,078,709	48.27	164,656,384	12.75	533,735,093	25.96

Loans	38,124,379	4.99	5,800,714	0.45	43,925,093	2.14
Total Income	764,623,894	100.00	1,291,653,425	100.00	2,056,277,318	100.00

\* total income is the sum of all income sources less net wages & salaries

### **Household entrepreneurship**

Households or members of households can be engaged in one or more small scale commercial business activities. In Table 4.1 two of the most highly engaged business activities were root crops (27%) and other vegetables and fruits (22%). These are also the predominant small scale business related activities in rural and urban areas, whilst noting also other self employment businesses in urban areas.

**Table 4.1: Distribution of households in Self Employed & Related Businesses in  
Area by type of commercial activity**

Type of commercial Activity	Urban		Rural		Solomon Islands	
	households	%	Households	%	households	%
Root Crops	63	18.98	1172	27.36	1,235	26.76

*\* A household can be involved in more than one type of commercial activity.*

### **Hours worked**

In this survey and in line with UN system of national accounts conceptualization, any activity resulting in the production of goods and services that add value to the national product is considered as an economic activity. This includes all market activities performed for pay or profit; all the non market activities, all agricultural activities which result in agricultural production like gathering of uncultivated crops, forestry, collection of firewood, hunting, fishing etc.) for own consumption, and the activities relating to own account production of fixed assets.

Table 4.3 overleaf show that at the national level, the average hours worked by households who earn Wages & Salaries is about 42 hours per week. In the urban and rural areas the average is about 47 and 39 hours per week respectively. It is observed that the average hours per household is relatively the highest (56 hours) in the other mining and quarrying industries mainly in the rural areas.

**Table 4.3: Average hours worked in a Week by households who earn Wages in Area by Industry**

Industry	Urban	Rural	Solomon Islands

## 2.4.3 – Income distribution

---

### ***Income Inequality***

Whilst inequality measures can be better represented with poverty related measures, it was felt that a broad measure of income distribution needed to be reflected in this report.

The concentration of income distribution can be represented by Gini coefficient which is a standard measure of (in)equality. It is closely associated with the Lorenz curve. The Lorenz curve is better reflected in the provincial report which includes the provincial distribution of incomes.

The Gini coefficient will equal to zero if income is distributed equally and if only one person owns all income, then Gini coefficient will equal to one where all other individuals have no income. The Gini coefficient of inequality varies between 0 and 1.

The general formulae for the Gini coefficient can be expressed as:

$$Gini = \frac{1}{2n^2 y} \sum_{i=1}^n \sum_{j=1}^n |y_i - y_j|$$

where  $n$  represents the population,  $y$  the average income (or expenditure) and  $y_i$  the income (or expenditure) of person  $i$ . For our purposes, we used annual expenditures.

The Gini coefficient as been further expressed and easily computed using an excel spreadsheet.

The Gini coefficient is the most commonly used indicator but it has a major disadvantage in that it is not additive. For example, the Gini coefficients for respective urban and rural areas when summed up would not equal to the country's Gini coefficient.

Table 4.6, shows that inequality as measured by the Gini coefficient is 0.361 for the Solomon Islands and by urban and rural areas it is 0.286 and 0.316 respectively, indicating relatively wider inequality in the rural areas.

<b>Table 4.6: Gini Coefficient for Total Annual Expenditure - Solomon Islands, Urban and Rural</b>		
Solomon Islands	Urban	Rural
0.361	0.286	0.316

The Gini coefficients have been derived from total annual expenditures and measured in nominal terms.
