Acknowledgements

This booklet was prepared as one of SPC’s commitments under the Strategic plan for fisheries management and sustainable coastal fisheries in the Pacific Islands, which was developed by Pacific Island countries and endorsed by the third Heads of Fisheries Meeting in August 2003. The booklet assists PICs in achieving Goal 3 of the strategic plan, which calls for development of practical and enforceable fisheries regulations.

SPC wishes to acknowledge the contribution of Terry Keju, Chief Fisheries Policy Adviser for the Republic of the Marshall Islands who collected most of the information contained in the booklet during the course of his training attachment at SPC.

SPC is also grateful to the different Pacific Island fisheries departments, which have helped develop this concise compendium and have checked the final draft for accuracy.

Aymeric Desurmont, SPC Fisheries Information Specialist, supervised, designed and edited the booklet, which was produced through funding from the Commonwealth Secretariat with support from the governments of Australia, France and New Zealand.

About this booklet

This booklet is not a legal text. References to legal texts used in compiling this information are given on page 32. For more details, refer to the legislations (from which these examples were drawn) on the SPC Coastal Fisheries Programme website (www.spc.int/coastfish/countries/countries.htm), or on the Pacific Islands Legal Information Institute webpages (<http://www.pacii.org/>). This information is current at the date of printing (September 2005) and is subject to change because several Pacific Island countries, states or territories are in the process of revising their fisheries regulations.

When using the information within this booklet, be sure to note the following:

- Only species for which there were size limits in place were taken into account.
- Values given in the *Size limits* column correspond to “minimum size” unless otherwise specified.
- The text used in the *Species* and *Size limits* columns was reproduced from the official text (but measurements were converted to millimetres (mm) to facilitate comparisons).
- The text used in the *Other regulations* column is a summary and does not necessarily use the legal text wording.
- Entries in each group are presented in alphabetical order by country. In instances where one country regulates several species from the same group, the entries are then in alphabetical order by species.
- The booklet includes illustrations of the various techniques used for measuring fisheries resources.

Contents

Foreword1

Size limits and other fisheries regulations:

Bivalves Clams2

 Oysters3

Gastropods Trochus4

 Turban shells5

 Triton shells5

Crustaceans Spiny lobsters6

 Slipper lobsters8

 Mantis shrimps9

 Coconut crab10

 Mangrove crab11

 Other crabs11

Holothurians Sea cucumbers - beche-de-mer12

Sea turtles 16

Bony fish Acanthuridae (surgeonfish, tangs, unicornfish)18

 Belonidae (needlefish)18

 Carangidae (jacks and pompanos)19

 Centropomidae (snooks)19

 Chanidae (milkfish)19

 Gerreidae (mojarras)20

 Kuhliidae (aholeholes)20

 Kyphosidae (sea chubs)20

 Labridae (wrasses)21

 Leiognathidae (slimys, slipmouths or ponyfish)21

 Lethrinidae (emperors or scavengers)22

 Lutjanidae (snappers)22

 Mugilidae (mulletts)24

 Mullidae (goatfish)24

 Scaridae (parrotfish)25

 Scombridae (mackerels, tunas, bonitos)25

 Serranidae (groupers and fairy basslet)26

 Siganidae (rabbifish)28

 Sphyraenidae (barracudas)28

Various techniques for measuring fisheries resources29

Foreword

There is no single template for fisheries management that can be applied to all Pacific Islands. However, most of the species that are fished in the region are the same from island to island. Because of this shared biological heritage, there are certain fundamental principles that can be transferred from each island as "minimum terms and conditions" for maintaining viable coastal fisheries. Chief among these are biological and ecological protection measures that are simple to understand and therefore comparatively simple to enforce. Size limits in particular are methods that have been used in Pacific Island fisheries regulations for many decades, and which have traditional expressions as well. There is a certain intuitive understanding that it is probably better to not catch fish, or invertebrates, until they are old enough to reproduce. However, it is less obvious what the age is of first reproduction for most of these creatures, particularly when this age may vary according to habitat and climate.

This booklet is a vehicle for sharing knowledge between the islands of the Pacific Community about the basic fishery management measures that have been used in different places for regulating particularly important or potentially vulnerable species. Regulations should not be transferred verbatim from one area to another unless their situations are known to be similar. This booklet is not intended to promote any particular management measure or approach, but indicates the range of measures that have been used. It also presents the legal and fishery management precedents that have been set in various countries. This information will be useful to Pacific Island governments that are developing or revising fisheries regulations.

Tim Adams
 Director, SPC Marine Resources Division

Country / Territory

Clams

Hippopus hippopus

Tridacna derasa

Tridacna maxima

Tridacna squamosa

Giant clams (Tridacnidae)	7 in (180 mm) across the longest part of shell		American Samoa
<i>Tridacna maxima</i> bēnitier pahua	120 mm across the longest part of shell		French Polynesia
Tridacnid clams (giant clams) <i>Tridacna maxima</i> , <i>T. squamosa</i> , <i>T. derasa</i> or any other <i>Tridacna</i> , and <i>Hippopus hippopus</i> hima	7 in (180 mm) across the shell	No commercial harvest allowed. Bag limit for personal use (3 pcs/person/day).	Guam
Clams gege	180 mm across the shell	Bag limit (10 clams/day/person)	Niue
<i>Tridacna maxima</i> faisua	160 mm across the shell		Samoa
<i>Tridacna squamosa</i> faisua	200 mm across the shell		Samoa
<i>Tridacna derasa</i> tokanoa molemole	260 mm across the shell		Tonga
<i>Tridacna maxima</i> kukukuku	155 mm across the shell		Tonga
<i>Tridacna squamosa</i> matahele	180 mm across the shell		Tonga

-2-

Oysters

Pinctada margaritifera

Pteria penguin

<i>Pinctada margaritifera</i> black-lip mother-of-pearl oyster shell	6 in (152 mm) diameter along the largest dimension across the outside of the shell	Closed season (1 August–31 December).	Federated States of Micronesia - Kosrae
<i>Pinctada margaritifera</i> black-lip mother-of-pearl oyster shell	4 in (100 mm) diameter across the nacre	Closed season (1 August–31 December).	Federated States of Micronesia - Pohnpei
<i>Pinctada margaritifera</i> pearl oyster	100 mm from the butt or hinge to the opposite edge or lip		Fiji Islands
<i>Pinctada margaritifera</i> huître perlière et nacrière	130 mm shell diameter across the nacre, excluding the growth processes (spines)	Limited season and limited areas as declared by local government.	French Polynesia
<i>Pinctada margaritifera</i> black-lip-mother-of-pearl oyster shell	4 in (100 mm) diameter across the nacre	Closed season (1 August–31 December).	Marshall Islands
<i>Pinctada margaritifera</i> blacklip pearl oyster chesiuch	4 in (100 mm) of shell width	Closed season (1 August–31 December).	Palau
<i>Pinctada margaritifera</i> pearl oyster tifa	130 mm from the hinge to the opposite edge as its longest point		Samoa
<i>Pteria penguin</i> winged pearl oyster tofe	200 mm across the umbo-ventral length		Tonga

-3-

Gastropods

Species

Size limits

Other regulations

Country / Territory

Trochus

Trochus niloticus

<i>Trochus niloticus</i> trochus	80 mm min. and 110 mm max. across the shell	Limited season and areas, individual quotas, license required, no export unless approved by Council.	Cook Islands (Aitutaki)
<i>Trochus niloticus</i> trochus tukasungai	3 in (76 mm) min. and 4 in (100 mm) max. across the shell	No harvest at anytime unless officially authorized.	Federated States of Micronesia - Kosrae
<i>Trochus niloticus</i> trochus	3 in (76 mm) diameter at the base	Restrictions on season, areas and harvesting technique.	Federated States of Micronesia - Pohnpei
<i>Trochus niloticus</i> trocas shell; sici	90 mm basal diameter		Fiji Islands
<i>Trochus niloticus</i> troca	80 mm min. and 110 mm max. longest diameter	Limited season and limited areas as declared by local government.	French Polynesia
<i>Trochus niloticus</i> trochus; aliling (for commercial purposes)	4 in (100 mm) across the shell	Bag limit (1000 pcs/person/year), license required, limited areas, max total harvest: 10,000 pcs/year.	Guam
<i>Trochus niloticus</i> trochus; aliling (for personal use)	3 in (76 mm) across the shell	Bag limit (50 pcs/person/day). Export limited to 20 pcs/person.	Guam
Trochus	3 in (76 mm) basal diameter	Regulations on season, areas, harvesting technique, and export. Fishing license required.	Marshall Islands
<i>Trochus niloticus</i> troca	90 mm longest diameter	Fishing license required.	New Caledonia
<i>Trochus niloticus</i> trochus, semum	3 in (76 mm) basal diameter	Closed seasons and limited fishing areas.	Palau

Tectus sp.

<i>Tectus</i> sp. aliao Samoa	65 mm across the base of the shell		Samoa
<i>Trochus niloticus</i> trochus/top shell aliao lapoa	75 mm across the base of the shell		Samoa
Trochus	80 mm min. and 120 mm max. diameter as measured across the base	No export allowed.	Solomon Islands
Trochus	90 mm basal diameter	Export permit required.	Vanuatu
<i>Trochus niloticus</i> troca	90 mm min. and 110 mm max. longest diameter	Export permit required.	Wallis & Futuna

Turban shells

<i>Turbo marmoratus</i> burgau	160 mm min. and 180 mm max. longest diameter	Limited season and limited areas as declared by local government.	French Polynesia
<i>Turbo</i> sp. green snail alili	30 mm across whorl opening		Samoa
<i>Turbo marmoratus</i> green snail	150 mm in its longest dimension	Export permit required.	Vanuatu

Triton shells

<i>Charonia tritonis</i> triton shell kele'a	200 mm in length when measured along the outside of the shell from one end to the other		Tonga
<i>Charonia tritonis</i> trumpet shell	200 mm in length when measured along the outside of the shell		Vanuatu

Spiny lobsters

Panulirus homarus

Panulirus longipes femoristriga

Panulirus ornatus

Panulirus penicillatus

Panulirus sp. spiny lobsters	3 1/8 in (85 mm) carapace length, defined as the mid-line measurement taken from the leading edge of the carapace between the horns to the rear edge of the carapace	No taking of egg-bearing females.	American Samoa
Lobsters	1 lb weight or 3 in (76 mm) carapace length	No taking of egg-bearing females.	Federated States of Micronesia - Kosrae
Panulirus penicillatus langouste verte oura miti	180 mm length measured from the eye to start of the caudal fin	No taking of egg-bearing females. Closed season (1 November–31 January).	French Polynesia
Panulirus sp. spiny lobsters (for commercial purposes)	4 in (100 mm) total length of the carapace measured from the dorsal posterior end of the carapace to the point between the two horns over the eyes	No taking of egg-bearing females.	Guam
Panulirus sp. spiny lobsters (for personal use)	3 1/2 in (90 mm) total length of the carapace measured as above	(same as above)	Guam
Panulirus sp. rock lobsters, crayfish	85 mm carapace measured from the eyes	No taking of egg-bearing females.	Kiribati
Langoustes (lobsters)	75 mm from the midline at the base of the supra orbital spines to the end of the cephalothorax	No taking of egg-bearing females.	New Caledonia
Lobsters, crayfish	130 mm tail length	No taking of egg-bearing females. No taking of soft-shelled animals. Bag limit (10 pcs/person/day).	Niue
Rock lobsters (cheraprukl) Panulirus versicolor (bleached); P. penicillatus (raiklius); P. longipes femoristriga (melech)	6 in (152 mm) total length of the carapace (from the tip of the rostrum midway between the eyes to the end of the carapace)	No taking of egg-bearing females. No export allowed.	Palau
Palinuridae spiny rock lobsters, including: Panulirus versicolor, P. longipes, P. homarus (for commercial purposes)	100 mm tail length or 175 mm total length (mid-section between the eyes to tail), and 169 g tail weight, or 409 g total weight	No taking of egg-bearing females. Licenses for PNG citizens only. Limitations on season, fishing gear and total allowable catch as declared by Minister.	Papua New Guinea
Panulirus ornatus tropical rock lobster (for commercial purposes)	115 mm total of tail length	No taking of egg-bearing females. Limited number of licenses issued. Gear restrictions.	Papua New Guinea (Torres Strait and Western Province)
Panulirus sp. lobsters ula sami	80 mm from the base of the horns to the rear edge of the carapace; or 140 mm from the base of the horns to the end of the tail	No taking of egg-bearing females. No taking of soft-shelled animals.	Samoa
Panulirus sp. crayfish	80 mm along the mid-line from immediately behind the rostral horn to the rear edge of the carapace	No taking of egg-bearing females.	Solomon Islands

Spiny lobsters (continued)

Panulirus versicolor

Panulirus sp. lobsters 'uo	75 mm carapace length from the midline immediately behind the rostral horns to the rear edge; or 45 mm tail width between the lateral notches of the first tail segment measured from the ventral side of the tail	No taking of egg-bearing females.	Tonga
Rock lobsters	220 mm from the front of the carapace to the end of the tail	No taking of egg-bearing females. No spearfishing.	Vanuatu
Palinuridae langoustes uo	75 mm from the midline at the base of the supra orbital spines to the end of the cephalothorax	No taking of egg-bearing females.	Wallis & Futuna

Slipper lobsters

Parribacus holthuisi

Parribacus holthuisi cigale de mer tianee	140 mm length, measured from the eye to the start of the caudal fin	No taking of egg-bearing females. Closed season (1 November–31 January).	French Polynesia
Scyllarides sp. slipper lobsters (for commercial purposes)	3 in (75 mm) carapace (shell) width	No taking of egg-bearing females.	Guam
Scyllarides sp. slipper lobsters (for personal use)	2 in (50 mm) carapace (shell) width	(same as above)	Guam

Scyllarides sp.

Scyllaridae slipper lobsters, including: Thenus orientalis	52 mm carapace length (midsection between the eyes to the base of the carapace cover)	No taking of egg-bearing females. Licenses for PNG citizens only. Limitations on season, fishing gear and total allowable catch as declared by Minister.	Papua New Guinea
--	---	--	------------------

Thenus orientalis

Parribacus sp. slipper lobster papata	150 mm in total length when laid flat and measured from the front edge of the carapace to the rear edge of the telson	No taking of egg-bearing females. No taking of soft-shelled animals.	Samoa
---------------------------------------	---	--	-------

Parribacus sp. slipper lobsters tapatapa	150 mm in length when laid flat and measured from the front edge of the carapace to the rear edge of the telson	No taking of egg-bearing females.	Tonga
--	---	-----------------------------------	-------

Mantis shrimps

Lysiosquilla maculata

Squilla mantis squille varo (Note: scientific name for this species has changed and is now: Lysiosquilla maculata)	180 mm length, measured from the eye to the start of the caudal fin	No taking of egg-bearing females. Closed season (1 November–31 January).	French Polynesia
---	---	--	------------------

Coconut crab

*Birgus latro*

<i>Birgus latro</i> coconut crab	3 in (75 mm) across the widest portion of the back	No taking of egg-bearing females.	American Samoa
<i>Birgus latro</i> coconut crab (for commercial purposes)	4 in (100 mm) carapace width	Bag limit (50 animals sold/person/year). No taking of egg-bearing females.	Guam
<i>Birgus latro</i> coconut crab (for personal use)	3 in (75 mm) carapace width	Bag limit (10 animals/person/day). No taking of egg-bearing females.	Guam
Coconut crab uga	36 mm thoracic length	No taking of egg-bearing females. No taking of soft-shelled animals	Niue
<i>Birgus latro</i> coconut crab	90 mm length measured along the carapace from immediately behind the rostral horn to the rear edge of the carapace in the midline	No taking of egg-bearing females. Export permit required.	Solomon Islands
Coconut crab	90 mm carapace length	No taking of egg-bearing females. Annual quotas (Torba Province: 5000 pcs; Sanma Province: 2000 pcs). No export.	Vanuatu
<i>Birgus latro</i> crabe de cocotier uu	36 mm thoracic length	No taking of females bearing eggs or with an orange abdomen. No taking of soft-shelled animals.	Wallis & Futuna

Mangrove crab

*Scylla serrata*

<i>Scylla serrata</i> mangrove crab	6 in (152 mm) across widest portion of back	No taking of egg-bearing females.	American Samoa
<i>Scylla serrata</i> mangrove crab	6 in (152 mm) along largest dimension across outside of shell	No taking of egg-bearing females.	Federated States of Micronesia - Kosrae
<i>Scylla serrata</i> swimming crab qari dina	125 mm across the widest part of the carapace or shell		Fiji Islands
<i>Scylla serrata</i> crabe upai	120 mm greatest distance across width	No taking of egg-bearing females. Closed season (1 November–31 January).	French Polynesia
<i>Scylla serrata</i> crabe de palétuvier	140 mm widest dimension of the carapace	Closed season (1 Dec.–31 Jan.) No taking of soft-shelled animals. Crabs must be sold whole.	New Caledonia
<i>Scylla serrata</i> mangrove crab, emang	6 in (152 mm) across the shell (carapace)	No taking of egg-bearing females. No export.	Palau
<i>Scylla serrata</i> mangrove crab pa'alimago	150 mm across widest part of the carapace	No taking of egg-bearing females or soft-shelled animals.	Samoa

Other crabs

*Carpilius maculatus*

Crabs (other than the coconut crab, <i>Birgus latro</i>) (for commercial purposes)	3 in (75 mm) carapace (shell) width	No taking of egg-bearing females.	Guam
Crabs (other than the coconut crab, <i>Birgus latro</i>) (for personal use)	2 in (50 mm) carapace (shell) width	(same as above)	Guam
<i>Carpilius maculatus</i> kuku	120 mm across widest part of the carapace	No taking of egg-bearing females. No taking of soft-shelled animals.	Samoa

Sea cucumbers (beche-de-mer)

	All holothurians (beche-de-mer)	76 mm length (dry)	Export of <i>Holothuria scabra</i> (sandfish, dairo) prohibited.	Fiji Islands
	<i>Actinopyga echinites</i> deepwater redfish	250 mm length (live) 150 mm length (dry)	Limitations on season, fisheries access and fishing gear. Total allowable catch for different provinces. Control of export.	Papua New Guinea
	<i>Actinopyga lecanora</i> stonefish	250 mm length (live) 150 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Actinopyga mauritiana</i> surf redfish	200 mm length (live) 80 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Actinopyga miliaris</i> blackfish	150 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Bohadschia argus</i> tigerfish	200 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Bohadschia similis</i> chalkfish	250 mm length (live) 70 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Bohadschia vitiensis</i> brown sandfish	200 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Holothuria atra</i> lollyfish	300 mm length (live) 150 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Holothuria edulis</i> pinkfish	250 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
	<i>Holothuria fuscogilva</i> white teatfish	350 mm length (live) 150 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea

Sea cucumbers (beche-de-mer)

 <i>Holothuria fuscopunctata</i>	<i>Holothuria fuscopunctata</i> elephant trunkfish	450 mm length (live) 150 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
 <i>Holothuria nobilis</i>	<i>Holothuria nobilis</i> black teatfish	220 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
 <i>Holothuria scabra</i>	<i>Holothuria scabra</i> sandfish	220 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
 <i>Stichopus chloronotus</i>	<i>Stichopus chloronotus</i> greenfish	200 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
 <i>Stichopus hermanni</i>	<i>Stichopus hermanni</i> curryfish	250 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
 <i>Thelenota ananas</i>	<i>Thelenota ananas</i> prickly redfish	250 mm length (live) 150 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
 <i>Thelenota anax</i>	<i>Thelenota anax</i> amberfish	200 mm length (live) 100 mm length (dry)	(same as <i>A. echinites</i>)	Papua New Guinea
 <i>Actinopyga echinites</i>	<i>Actinopyga echinites</i> deepwater redfish telehea	120 mm length (live) 60 mm length (dry)		Tonga
 <i>Holothuria atra</i>	<i>Holothuria atra</i> lollyfish loli	165 mm length (live) 80 mm length (dry)		Tonga
 <i>Holothuria fuscogilva</i>	<i>Holothuria fuscogilva</i> white teatfish huhuvadu	320 mm length (live) 160 mm length (dry)		Tonga
 <i>Holothuria fuscopunctata</i>	<i>Holothuria fuscopunctata</i> elephant's trunk fish mula	350 mm length (live) 150 mm length (dry)		Tonga
 <i>Holothuria nobilis</i>	<i>Holothuria nobilis</i> black teatfish mokohunu	260 mm length (live) 130 mm length (dry)	Harvesting temporarily prohibited.	Tonga
 <i>Holothuria scabra</i>	<i>Holothuria scabra</i> sandfish nga`ito	160 mm length (live) 70 mm length (dry)		Tonga
 <i>Thelenota ananas</i>	<i>Thelenota ananas</i> prickly redfish holomumu	300 mm length (live) 120 mm length (dry)		Tonga

Sea turtles

 <p><i>Chelonia mydas</i> (green turtle)</p>	<p>Turtles</p> <p>27 in (685 mm) measured over the top of the carapace shell lengthwise</p>	<p>Closed seasons: 1 June–31 August and 1 December–31 January. Egg collecting and killing turtles while they're onshore prohibited.</p>	<p>Federated States of Micronesia - Kosrae</p>
<p>Green turtle</p>	<p>34 in (865 mm) measured over the top of the carapace shell lengthwise</p>	<p>Closed seasons: 1 June–31 August and 1 December–31 January. Egg collecting prohibited.</p>	<p>Federated States of Micronesia - Pohnpei</p>
<p>Hawksbill turtle</p>	<p>27 in (685 mm) measured over the top of the carapace shell lengthwise</p>	<p>(same as above)</p>	<p>Federated States of Micronesia - Pohnpei</p>
 <p><i>Dermochelys coriacea</i> (leatherback turtle)</p>	<p>Green turtle</p> <p>34 in (865 mm) across carapace length</p>	<p>Egg collecting prohibited. No taking of turtles while they're onshore.</p>	<p>Marshall Islands</p>
<p>Hawksbill turtle</p>	<p>27 in (685 mm) across carapace length</p>	<p>(same as above)</p>	<p>Marshall Islands</p>

<p><i>Chelonia mydas</i> green turtle melob</p>	<p>34 in (865 mm) across carapace length</p>	<p>Closed seasons (June, July, August, December and January). Egg collecting prohibited. No taking of female turtles while they're onshore.</p>	<p>Palau</p>
<p><i>Eretmochelys imbricata</i> hawksbill turtle ngasech</p>	<p>27 in (685 mm) across carapace length</p>	<p>(same as above)</p>	<p>Palau</p>
<p><i>Chelonia mydas</i> green turtle laumei</p>	<p>700 mm as its longest part measured along the curve of the carapace</p>	<p>No taking or destruction of eggs, no disturbance of nests. Director of Fisheries may declare closed seasons.</p>	<p>Samoa</p>
<p><i>Eretmochelys imbricata</i> hawksbill turtle laumei</p>	<p>700 mm as its longest part measured along the curve of the carapace</p>	<p>(same as above)</p>	<p>Samoa</p>
 <p><i>Eretmochelys imbricata</i> (hawksbill turtle)</p>	<p>Sea turtles (All species except the leathery backed turtle or luth, <i>Dermochelys coriacea</i>)</p> <p>750 mm total carapace length</p>	<p>Fishing and egg collecting for leathery backed turtle prohibited year-round. Fishing and egg collecting for other turtles prohibited from 1 June–31 Aug. and 1 Nov.–31 Jan. All commercial uses prohibited.</p>	<p>Solomon Islands</p>
<p>Turtles fonu (All species except the leatherback turtle, <i>Dermochelys coriacea</i>)</p>	<p>450 mm shell length</p>	<p>Fishing for leatherback turtle prohibited year-round. Closed season for other turtles: August–February included. Egg collecting and nest disturbance prohibited. Use of spear or speargun prohibited.</p>	<p>Tonga</p>

Acanthuridae (surgeonfish, tangs, unicornfish)

Acanthurus sp.

Acanthurus sp. (*Hepatus* sp.)
surgeonfish
balagi

200 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Naso sp.
unicorn-fish, leather jacket
ta

300 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Acanthurus sp.,
Ctenochaetus sp.
surgeonfishes and tangs
alogo, pone, palagi

200 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Naso sp.
unicornfishes
ume, ilillia, pa'umalo

200 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Belonidae (needlefish)

Belone sp.

Belone sp.
longtom, garfish, greengar
saku busa

300 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Carangidae (jacks and pompanos)

Caranx sp.

Caranx sp.
crevally, trevally, pompano
saqa (excluding vilu/saqa)

300 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Caranx sp.,
Carangoides sp.
jacks and trevallies
malauli, lupota, lupo

250 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Selar sp.

Selar sp.
bigeye scad
atule

150 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Director of Fisheries may
declare closed seasons.

Samoa

Centropomidae (snooks)

Lates calcarifer

Lates calcarifer
barramundi

360 mm total length
when sold or exported

Papua New Guinea

Chanidae (milkfish)

Chanos sp.

Chanos sp.
milk fish
yawa

300 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Chanos sp.
milkfish
ava

300 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Bony fish

Species

Size limits

Other regulations

Country / Territory

Gerreidae (mojarras)

Gerres sp.

Gerres sp.
mojarra
matu

100 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Gerres sp.
mojarra (silver biddies)
matu

120 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Kuhliidae (aholeholes)

Kuhlia sp.

Kuhlia sp. (*Dules* sp.)
glassperch, aholehole
ika droka

150 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Kyphosidae (sea chubs)

Kyphosus sp.

Kyphosus sp.
drummerfishes (rudderfish-
es or sea chubs)
ganue

200 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Labridae (wrasses)

Cheilinus undulatus

Cheilinus undulatus
Napoleon wrasse
ngimer, maml

25 in (635 mm) from tip
of snout to end of tail

No export allowed.

Palau

Cheilinus undulatus
humphead Maori wrasse

650 mm for fish export-
ed live

Live fish fishery for export
also regulated for: fishing
gear (handline only), fish-
ing areas, licenses, con-
servation (fish cages),
monitoring and reporting.

Papua New Guinea

Cheilinus sp.

Cheilinus sp.
wrasses
sugale

200 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Leiognathidae (slimys, slipmouths or ponyfish)

Gazza sp.

Gazza sp.
pouter, slimy, soapy,
peperok
kaikai

100 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Lethrinidae (emperors or scavengers)

Lethrinus sp.

Lethrinus sp.
sea bream, pig-faced
bream
kawago, dokonivudi,
musubi

250 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Gymnocranius sp.

Lethrinus sp.
small sea bream
kabatia, kake

150 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Lethrinus sp.
small sea bream
sabutu

200 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Lethrinus sp.,
Gymnocranius sp.
sea breams, emperors
mataeleele, Filoa

200 mm from the fur-
thermost point of the
snout to the middle of
the tailfin

Samoa

Lutjanidae (snappers)

Lutjanus sp.

Lutjanus sp.
snapper
damu

300 mm from the point
of the snout to the mid-
dle of the tailfin

Fiji Islands

Lutjanus argentimaculatus

Lutjanus argentimaculatus
mangrove jack

400 mm for fish export-
ed live

Live fish fishery for export
also regulated for: fishing
gear (handline only), fish-
ing areas, licenses, con-
servation (fish cages),
monitoring and reporting.

Papua New Guinea

Lutjanus rivulatus

Lutjanus rivulatus
Maori perch

550 mm for fish export-
ed live

(same as above)

Papua New Guinea

Lutjanus russellii

Lutjanus russellii
Moses perch

250 mm for fish export-
ed live

(same as above)

Papua New Guinea

Lutjanus sebae

Lutjanus sebae
red emperor

550 mm for fish export-
ed live

(same as above)

Papua New Guinea

Mugilidae (mullet)

Mugil sp.

Mugil sp.
grey mullet
kanace

200 mm from the point of the snout to the middle of the tailfin

Fiji Islands

Mugil sp., *Chaenomugil sp.*,
Crenimugil sp., *Liza sp.*,
Calamugil sp.
mullet
anae, afa, matapona, aua

200 mm from the furthestmost point of the snout to the middle of the tailfin

Director of Fisheries may declare closed seasons.

Samoa

Mullidae (goatfish)

Mulloidichthys sp.

Mulloidichthys sp.,
Pseudopeneus sp.,
Upeneus sp.
surmullet, goatfish, whisker-cod
ki, ose

150 mm from the point of the snout to the middle of the tailfin

Fiji Islands

Mulloides sp.,
Parupeneus sp.
goatfishes
ululaoa, vete, taulaia

150 mm from the furthestmost point of the snout to the middle of the tailfin

Samoa

Scaridae (parrotfish)

Bolbometopon muricatum

Bolbometopon muricatum
humphead parrotfish
berdebed

25 in (635 mm) from beak to center of tail

No export allowed.

Palau

Scarus sp.

Scarus sp., *Cetoscarus sp.*,
Hipposcarus sp.,
Bolbometopon sp.
parrotfishes
fuga

200 mm from the furthestmost point of the snout to the middle of the tailfin

Samoa

Scombridae (mackerels, tunas, bonitos)

Rastrelliger sp.

Rastrelliger sp.
long-jawed mackerel
salala

200 mm from the point of the snout to the middle of the tailfin

Fiji Islands

Rastrelliger sp.
long-jawed mackerel
(striped mackerel or Indian mackerel)
ga

200 mm from the furthestmost point of the snout to the middle of the tailfin

Samoa

Serranidae (groupers and fairy basslet)

	<p><i>Serranus</i> sp. rock cod, grouper, salmon cod donu, kawakawa, kavu (excluding small red spotted cod)</p>	<p>250 mm from the point of the snout to the middle of the tailfin</p>		<p>Fiji Islands</p>

Bony fish

Species

Size limits

Other regulations

Country / Territory

Siganidae (rabbitfish)

Siganus sp.

Siganus sp.
ketang, spinefoot, rabbitfish
Nuqa

200 mm from the point of the snout to the middle of the tailfin

Fiji Islands

Siganus sp.
rabbitfish
lo, pa'uulu, malava, tito

200 mm from the furthestmost point of the snout to the middle of the tailfin

Samoa

Sphyraenidae (barracudas)

Sphyraena sp.

Sphyraena sp.
barracuda
ogo

300 mm from the point of the snout to the middle of the tailfin

Fiji Islands

Various techniques used for measuring fisheries resources

Measure across the shell

Diameter across the nacre

Distance from the hinge to the opposite edge

Umbo-ventral length

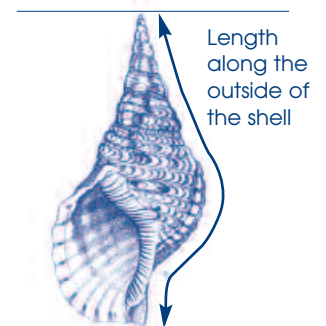

Longest dimension

Longest diameter

Basal diameter
(measure across the base of the shell)

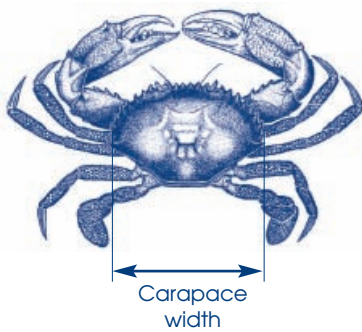

Length along the outside of the shell

Various techniques used for measuring fisheries resources

1. from the front edge of the carapace to the rear edge of the telson
2. carapace length
3. from the midline behind the rostral horns to the rear edge of the carapace
4. from the base of the supra orbital spines to the end of the cephalothorax
5. tail length
6. carapace width
7. tail width between the lateral notches of the first tail segment

- 1: measured in a straight line
- 2: measured along the curve of the carapace

* or: measure taken at the middle of the tail
